It does look like a serious winner. Hating that I'll be waiting for PC support, but it will be worth it. Another really sweet feature is having it auto switch between apps depending on what's in focus, and have the custom switches, setups follow.

Still curious as to whether the soft switches can be configured into different sets or group, to be recalled depending on workflow within a single app (e.g. and "edit" bank, a "midi edit" bank, "global" bank, etc) so you aren't limited to 12 custom key commands and macros.

I should have looked through the online walkthrough before my last post - it gets even better:

12 assignable soft keys below the touch screen
24 soft keys in the screen, configured in pages, customizable for each app.

Nice. Really nice.

Ok.. I just went over to the Euphonix site, and I saw the new artist series
MC/MC-Mix.. I'm very impressed.

http://euphon221.securesites.net/artist/products/artist_sys_tems/overview.php

Those early pictures did not do these babies justice. Nice. And, I can configure the babies for a very (Cosmetics) nice setup...
Think BrianT's(Paris setup with the 4 Mec's and screens..

I'm actually floored and I'm "eating" my words. Nice Job Euphonix..

A fully configured setup (4Mix 1-MC) is still cheaper than Digi's C24 AND, works with all of the Big DAWS.. Nice work.

Nice. That's sort of what I've been trying to build with my C-16 replacement... (Sigh...)

Doug (no, the other Doug...)

P.S. Hi everybody! Happy New Year...

Hey Doug-

I was just thinking about you the other day as this product came closer to launch. How is your work going? No need for details, just want you to know I'm supportive.

Peace,

Ted

Thanks for the thought. Things are going reasonably well. It took me a while to get things spec'd out. The big player in the motor fader market is Penny & Giles, but they want \$85 each for their faders, in quantities of 100. Ouch... On the other hand, I can get the Alps fader (same one I think is used in the Euphonix controller) for about \$10 each in quantity. Much better, even though they're only rated for about 1/10th of the duty cycle of

the P&G. On top of that, I got free samples from Alps to do development with, and the P&G distributor wanted \$100 each!

I've already got a dual 2x40 LCD display with 16 rotary encoders ("endless knobs") that I designed for the MBmatrixSEQ and MB-808 projects, so I'm leveraging that design for this. Check out:

<http://www.analognotes.com/mbmatrixseq> and <http://www.analognotes.com/mb808> for the 3D mock ups I did of them. I'm waiting for the metal parts to be made - as soon as I have all the parts together I'll be able to post real pictures. I'm also working on wooden cases for the various projects - you can see some pictures of what I've been doing at:

<http://www.synthpanels.com/karma/mb808> I plan to at least make wooden side panels for this controller. (I've been making all kinds of wood side panels lately - I even have them for the C-16 if anybody is interested...) ;)

The other part of this project is interfacing with PARIS - I have a serial port board set up with a microcontroller and an LCD that displays commands as they are received from the EDS-1000 card. Next step will be to connect all these different parts together...

I'm a little hurt I wasn't included in the list, but I agree. Nice looking stuff.

Yale did 28% last year. After I get my bonus and do my taxes I'll take a nice long look at this. I think for me two Mix thingys + one Control would be pretty sweet.

Thad - I guess you saw it has support for Live (and Reason and many others) - pretty cool.

I think we'll all be in love with these things (once PC support arrives for PC users at least - word is April from a Euphonix rep). It appears you can use the touch screen to control channels - including rec arm, mute/solo, plugins, etc.

I'm also wondering if you can hard assign a fader to, for example, the master bus and only bank switch the remaining faders - that would be sweet, and not out of the question given Euphonix' attention to flexible functionality.

Regards,
Detric

Master fader: That's how Digi's controllers work. Hard assign per session.
Stays put until you tell it somethings different.

Being that the Euphonix folks are way mopre smarter than the Digi folks,
I'm sure they ironed that out..

That's my thinking. The four faders on the control are for a couple of groups and the master fader and then I can bank through with the other sixteen. Or maybe better yet, the control has the master fader and I select the other three so I write automation with them (I'm not good enough to write more than two or maybe three channels simultaneously anyway) and I can bank through the other sixteen. For me a 32 track project is on the largish side, though I do use a lot of groups and f/x. But still, if I had the setup I'm thinking of, 32 tracks, 16 groups, and 16 f/x in Live/SX (that switch with focus on the app), well, that'd be dreamy.

Here's hoping they get their PC stuff together.

Subject: Paris motor fader control. Was: Euphonix MC /Mix Wow

Posted by [Doug Wellington](#) on Sat, 01 Mar 2008 19:14:42 GMT

[View Forum Message](#) <> [Reply to Message](#)

Just thought I'd send an update for anyone who's interested...

I have now received the Alps K series motorized faders - I decided to not use the N model faders that are apparently in the Euphonix surfaces. The K series is much higher quality - there are two rails that the fader slides on - I can see why they are rated at 10x the lifespan! (But 2.5x the price.)

Also, the K series is very high performance - it only takes a small pulse to make it travel the full 100mm. (Good problem to have I figure...) I'm upgrading to a faster processor to handle that. In the meantime, I have touch sensors working and am converting fader movement to control messages.

For initial testing, I'm leveraging my existing code that only outputs MIDI, but once the basic system is stable, I'll start interacting directly with the EDS card.

Killer man.... I have a question, on the midi/EDS note - is it possible to have two inputs switchable for those running hybrid dual DAWs so it can control say Cubase/Nuendo/Sonar/Live/Whatever via midi and Paris w/o rebooting the device simply by toggling?
that would SO rock if it's doable.

VERY COOL! I also echo with what Aaron said, about switchable DAW control.
It Would Rocketh mosteth mightyth

Hey Doug,
Count me in for three when the design is ready.
Paris/Cubase here. Moving faders will be an
unbelievable achievement!

Between Mike Audet (plug developement), Dimitrios
(new techniques & ADC), Kim (this newsgroup) and yourself,
Paris will live on into the next decade with a little help from
another DAW.

Thank you very much!
Tom B.

Motorized faders on my C16's? Able to control other DAWs?

Way cool!

Gantt
