There is a full set on E-Bay that has the ribbon cables that you need along
with cat-5 for C-16 and Interface cable for EDS1000 card...I think it was
30 bucks... You can get the 10 and 16 pin ribbon female connectors and some
ribbon cable and make your own using a bench vice to press the cable into
the connectors after you cut the cable to size...Looking for EDS-1000!!!
If anyone has a card for sale,let me know...Thanks Dave.

Ed... if william ends up not buying yours I Will.I'm interested in the A8O Pro 24 if it is still
available.

Dempsey

0 plus shipping for the lot or I'll entertain offers. Everything
guaranteed to work except the IF2 port on one of the MECs.

For another $500.00, I'll throw in the enough 8 channel TRSM>TRSM snakes (all are Mogami except one beautiful Horizon snake) to route every analog I/O in this whole rig to 1/4" balanced patchbays. These snakes are all between 15' and 18' long.

End of a 9+ year odyssey.

DeejHi Joey, Ihave emailed you about the EdS1000
