A good read but not a great analysis. He phoned it in.

be replaced by \$1,500 Windows kit."

If price were the issue, he would have paid a lot less for the MacBook Pro and added 3rd party RAM at considerable savings. So he blows his credibility right off the top with that exaggerated comparison.

"It costs \$1,799 for the base model. But, set up the way anybody who

Pro."

Hypberbole. He's blaming Apple for the cost of a solid state drive. This makes no sense. Notice that the price he complains about is the price WITH the flash drive option. Yet Apple actually charges less than street price to add that drive.

If price is the issue, it's too soon to buy a 54GB solid state drive on ANY laptop, not just Apple's. Also, he adds the SSD to the MacBook Air and then compares that configuration to laptops without an SSD. If that's the comparison, then he should compare the \$1700 non-SSD version of the Air to the other subnotebooks. And at that point he has little point.

He could have complained about the lack of firewire or grouched about the need for an adapter to use ethernet, but he didn't.

seem to like it at all. Apple shares were down \$9.74 to \$169.04 the day

The article I linked the other day showed that Apple shares usually go down after the keynote. Also, the entire market took a hit on Wednesday for issues not directly related to a speech by Steve Jobs. :^)

"I really wanted to see something really great and useful from Apple this week. On the top of my wishlist was a true sub-notebook. Something I could throw in a portfolio or briefcase for short hops."

Since he's not complaining about a lack of ports, I don't know why the Air doesn't fulfill that role for him. Maybe he's too cool to buy the base version with the hard drive.

He did like the movie rentals, which I think may be the most important announcement of MacWorld for future impact on Apple's growth. He did like the Time Capsule, which is at least interesting. He hates the iPhone and AT&T, so he'll just have to keep complaining about that until their exclusive relationship ends.

Cheers,
-Jamie

Shelly's complaints, however generalized, pretty much echo that of every PC user who's passed on going the Mac route:
There is one price point with Apple Macs: \$2000 and up. Sure, more computer is more computer, but most people just don't need the bleeding edge for \$2-4k to email Aunt Sally and store the family photo album.

The MacBook, feels cheap, and while it has good specs and isn't really out of line with a comparable PC laptop, it sits alone in its sub \$2k price point in the Apple lineup. My laptop cost \$750 and has comparable specs to the Macbook, but with more I/O (it's closer to the Macbook pro in feature set - not psyched about Vista on it, but I can't deny it gets the same job done for a lot less money).

The same is true of desktops. So his point is based on his opening comments about being enamoured with all things Apple.

Sure, he could have gone cheaper, but money is hardly a concern for Shelly considering his success - it's just a reference point that he could have spent 1/3 of what he did and accomplished the same amount of work, but being enamoured with Apple, he goes for the gold instead. In other words, he's a victim of clever marketing - getting you to buy way more than you need or want.

When you have the option to pay \$1000 or less and get the same job done (depending on what job you are trying to accomplish of course), vs. going with a brand mainly to be brand loyal and hip while having no choice under \$2-4k or more, how else do you evaluate the two options?

His comparison may not be technically fair on the Air, but he is right - when it comes down to getting the job done, any advantage to Air vs a regular laptop fade away pretty quickly, and you are left with a much smaller drive for a lot more money.

Regards,
Dedric

I don't think that's what he's saying. The box he's complaining about
is under \$2K (configured the way most people who care about price
would buy it). Just because he stupidly overpaid for his Mac doesn't
mean others will. But if that's your complaint, there are Macs for less
than \$2k.

If the general complaint about Apple is price, then it should be noted
that the new desktop boxes are less expensive than Dell's, and the new
super light notebook is less expensive than Sony's (and under 2K in the
standard configuration).

> The MacBook, feels cheap, and while it has good specs and isn't really
> out of line with a comparable PC laptop, it sits alone in it's sub \$2k
> price point in the Apple lineup.

Other than the Mac Mini and iMac. Oh, you mean laptops. Yes, except for
the low end MacBook Pro and the new MacBook Air, sans flash drive. As
for "feeling cheap," the MacBook does have a plastic case. But my wife
has one (G4 version); it seems reasonably rugged and has held up well.
It also gets better wireless reception than my metal-clad Powerbook.

> My laptop cost \$750 and has comparable
> specs to the Macbook, but with more I/O (it's closer to the Macbook pro

> the same job done for a lot less money).

It's good to have choices. Apple is only one choice. If another choice
is better for you, by all means buy it. If everyone bought a Mac, Apple

would be insufferable. :^)

Competition is good. On the flip side, if Apple weren't pushing the envelope, the other companies building commodity MSWindows boxes would be less motivated to give you stuff you like. So keep buying what moves you, be it Apple or someone else.

- > The same is true of desktops. So his point is based on his opening

I can't speak for him, but I didn't buy way more than I need or want, and I have a Mac.

- > When you have the option to pay \$1000 or less and get the same job done
- > (depending on what job you are trying to accomplish of course), vs.
- > going with a brand mainly to be brand loyal and hip while having no
- > choice under \$2-4k or more, how else do you evaluate the two options?

If you're implying that the only reason people buy Macs is to be "brand loyal and hip," you're wrong. That doesn't apply to most of the Mac users I know, who own Macs to get work done and chose them as the preferred tool given the options. Frankly, I would rather be using BeOS but that choice was torpedoed.

- > His comparison may not be technically fair on the Air, but he is right -
- > when it comes down to getting the job done, any advantage to Air vs a
- > regular laptop fade away pretty quickly, and you are left with a much
- > smaller drive for a lot more money.

Obviously the Air made compromises in order to be thin and light. This will only be a benefit for those to whom thin and light is a compelling enough advantage to outweigh (so to speak) any down side. :^)

It's a narrowly aimed product, and I'm not surprised that people outside of the target market miss the point. I think he phoned it in because he complained about non-Air-specific-issues, blatantly exaggerating to do so, while missing real issues with the Air.

I was actually just referring to the fact that with every Mac release, there are three desktop models, usually starting at \$2k and going up - this round, \$2799 is the starting price, and only options for dual quad cores, no range below that for people who don't need "blinding speed" to write book reports ;-).

There are 2 laptop model choices, ranging between \$1100 and \$2800 for one of the six base models. In the PC world there are choices in each category at pretty much every \$100 increment,

starting at \$300 and going up to \$10k+. Not that I would buy a \$300 desktop, but I still come back to the laptop I'm typing this on, costing significantly less than the least expensive Macbook (current) and only a slightly slower cpu (since it's a model from early last year), for \$400 less than the comparable Macbook, but otherwise, pretty much identical (it does have a partially aluminum case, and feels better than the Macbooks I've tried).

There has to be a reason Apple only has a minority share of the personal computer market... ;-)

I wasn't trying to knock Apple, and I'm not attached to my PCs (other than the significant investment in software that is costly to replace or crossgrade) - just saying that imho, Shelly's reasoning is based on the fact that he's enamoured with the *chique* (sp?) of Apple, rather than just getting what he needs, and that without a mystical, glorious Keynote unveiling of trend setting products, that *chique* doesn't last long. Imho, that *chique* is hurting consumers as it keeps Apple's product prices higher, with less range of price point competition, but for Apple customers, price doesn't seem to be a concern. Basically Apple has its' customers right where it wants them. Imho, it should be the other way around, and then we would truly have more choices.

re: BeOS.... same here.

Sure, but you don't need a tower to write book reports. A Mac Mini will do fine for under \$1k.

It's entirely possible to criticize the Mac without hyperbole, ya know. :^)

> There are 2 laptop model choices, ranging between \$1100 and \$2800 for

Right, because there are more companies making hardware for MSWindows boxes. That's an advantage because there is more range of choice, and a disadvantage because they all have to dance to the MSWindows beat.

Apple has fewer boxes but they control everything on those boxes. That's a disadvantage because of the fewer choices, and an advantage because there is less to go wrong or be incompatible, and if anything does go wrong, a single company can fix it.

Sounds like you like your computer. Great!

> There has to be a reason Apple only has a minority share of the personal

There are many reasons. It would take too long to recount the history here.

Poor guy. But his claims went beyond that. I zinged him for his hyperbole.

> Imho, that *chique* is hurting consumers as it keeps Apple's
> product prices higher, with less range of price point competition, but

Maybe for some, but not overall. Apple is competing on features and implementation. And even, lately, on price.

> Basically Apple has its' customers right where it wants them. Imho, it should be
> the other way around, and then we would truly have more choices.

Choice is good. Competition is good.

Apple no more has its customers where it wants them than Microsoft has theirs well thumbed over. For example you yourself are trapped in Microsoftland by your committed investments there.

> re: BeOS.... same here.

Yep. Sigh... Yet another reason to mistrust Apple, to an extent, and Microsoft to a much larger extent.

Now why did you think I was criticizing Apple with hyperbole? Could it be that Apple skin is just a little thin? And... I don't recall a desktop release with more than 3 models... so, "every" means "every". That's not called hyperbole, it's called history. ;-))

By "blinding speed" I seriously meant a dual quad in general - any dual quad. You are missing the whole market of families that on average probably have about \$1k to spend on a computer to serve everyone, and when faced with a full desktop with monitor included, or a cube with limited expansion and I/O capabilities, and monitor additional, where do you think they will go? Just sayin' that the PC aisle at CompUSA and BestBuy are always busier than the Apple sections, and the number of PC

options dwarfs the Mac shelves significantly. This isn't our market, so it's easy to overlook it.

Nothing wrong with Macs, but you have to admit that the general culture and approach of Apple is "build loyalty by limiting choices both on the way in and when it comes time to upgrade".

[View Forum Message](#) <> [Reply to Message](#)

Hey James,

No, it isn't another "one of those" :-)

Where are their desktops you quoted? I didn't see them in the Apple store under "Mac Pro".

I wasn't talking about Mac minis. They are cool, but limited since they can't be upgraded with extra ram (or so I've been told), and no PCIe slots. Is that true?

They seem like a potentially nice solution for a sample library farm machine, but if Ram is limited to 2G, then

it wouldn't work for what I need. I know other composers that considered the same, but had to pass on them for that reason alone.... again, choice... can't upgrade it to fit what you want. I specifically said those weren't what I was comparing. HP and Dell both have minitowers/cubes now, so those would be a more consistent comparison, if we were making that comparison, but we aren't.

I had also heard the MacMinis might not be around much longer - fact or rumor?

Btw - my comments were just an observation, not a slam, or hyperbole, or dig - just following up with what Shelly Palmer said, pointing out that his comments make sense to those of us who aren't Mac fanatics, even if he was technically generalizing, and he's a self proclaimed Mac fanatic.

It is interesting how such an observation brings such strong reactions from Mac users. Kind of proves my point on the marketing vs. choice issue: when your customers love you, don't question anything, and will buy anything you sell, you can charge whatever you want and limit the customer's options as well. Case in point: Shelly's comment on AT&T and the iPhone - I'm sure their coverage is fine for most people (it was for us) - but we're on Verizon with no choice to even use an iPhone, so there's a pretty big missed market for Apple - not my problem though, but it is a limited choice situation that favors AT&T even if iPhone users don't like AT&T.

I thought we all agreed choice was a good thing? Was I wrong in that assumption?

I really never intended this to be a Mac/PC debate. It was just my interpretation of Shelly's comments, nothing more. Let's leave it there please.

Regards,
Dedric

Here we go again! Apple has desk top models under 2K. Apple's market share probably has more to do with ignorant people spewing ignorant things about Apple.

Apple desk top models that start under 2K:

\$599.00
or as low as \$15 a month

\$799.00
or as low as \$19 a month

\$1,199.00
or as low as \$29 a month

\$1,499.00
or as low as \$36 a month

\$1,799.00
or as low as \$43 a month

Or are we going to argue form factor?

> it's called history. ;-))

Maybe I misunderstood you. I saw "hyperbole" in your statement only because you switched from talking about laptops, to talking about "desktop models," claimed they were only 2K and up, and said there's no range below that for people who don't need "blinding speed" to write book reports.

In fact there is a range of suitable Macs below that. In both laptops and "desktops." Plenty fast for writing reports. Overkill even.

BTW, both iMacs and Mac Minis are desktop machines.

Now about that skin thing. I don't know how thick Apple's skin is, but on a regular apple it's thin enough to eat. Thinner than a Macbook Air. ;^)

I personally don't care if you criticize Apple. I love that you buy non-Mac boxes, somebody has to.

But if your claims aren't consistent, logical and true then I can't protect you in the wild world of time wasting computer bashing conversations. :^)

There are plenty of criticisms to be made without hype. For example, the lack of firewire on the Air limits its market. Also, and this is my biggest criticism right now, WHERE'S MY #(*\$&@#\$ing UPDATED MACBOOK PRO WITH THE LED BACKLIT 17" HD SCREEN!!!!!!???? :^)

> By "blinding speed" I seriously meant a dual quad in general - any dual

> go?

Well lessee, I'm not missing any markets. I don't sell computers.

If I were that struggling young family I'd buy a Linux box and be done

with it.

So it sounds like what you would like to see is a Mac under \$1000 with dual quad chips? In time we'll probably see that. But right now, not. However, the core 2 duos in the low end Macs are no slouches.

> Just sayin' that the PC aisle at CompUSA
> and BestBuy are always busier than the Apple sections, and the number of
> PC options dwarfs the Mac shelves
> significantly. This isn't our market, so it's easy to overlook it.

I haven't overlooked the obvious. I'm not arguing that point. Did you think I was claiming that Macs outsell all other computers? Not hardly.

But as long as we're digressing, notice that the aisles at CompUSA are shrinking fast, while Apple stores are popping up like flies. Apple's market share is growing, FWIW. It's scary. PEOPLE, STOP BUYING MACS! :^)

> Nothing wrong with Macs,

LOL! OK, that's BS. :^)

There's plenty wrong with Macs. Just less than some of the other options, depending on your needs.

> but you have to admit that the general culture
> and approach of Apple is "build loyalty by limiting choices
> both on the way in and when it comes time to upgrade".

Heh. Now I think you're projecting because you choose to use MSWindows, from a company that has been convicted of limiting choices in the marketplace.

How far off topic are we now? This is turning into a boring PC/Mac bashfest. Woo.

Cheers,
-Jamie

So you ARE arguing form factor. Why didn't you say so? Well, OK. But that's pretty far afield from the Shelly article.

The cheapest Mac Pro is just over \$2K and is a quad box. If you need that kind of expansion, that's your least expensive option other than buying a refurb, or getting an educational or developer deal. Or getting a rebate from Amazon or a bundle from a dealer.

- > I had also heard the MacMinis might not be around much longer - fact or
- > rumor?

Who knows. I guess "rumor" by definition. :^)

- > Btw - my comments were just an observation, not a slam, or hyperbole, or
- > dig - just following up with what Shelly Palmer said, pointing out that

As I pointed out, the claims I called him on only make sense if you don't look at his logic. Read my original message more closely.

- > It is interesting how such an observation brings such strong reactions
- > from Mac users. Kind of proves my point on
- > the marketing vs. choice issue: when your customers love you, don't

- > you can charge whatever you want and limit the customer's options as
- > well.

I don't see that around here. For example, while I use a Mac, I don't have an iPod, iPhone or even a new Intel Mac. I don't buy things until they do what I want. Hence the wait for the new laptop. I also have used many non-Mac computers over the years and don't think Apple is perfect.

- > Case in point: Shelly's comment on
- > AT&T and the iPhone - I'm sure their coverage is fine for most people

> favors AT&T even if iPhone users don't like AT&T.

Yes, a gamble by Apple to go big with one company instead of trying to hit the wider market. It didn't make me switch either.

OTOH, maybe it was a way to ramp up production and hit the new market on favorable terms. The exclusive will be over after the two year (I think) period. By then maybe Apple will be better prepared to make necessary further agreements with more carriers, have more production capability, have proven the iPhone design and improved it, and will be ready to serve wider markets. I imagine the logistics of creating, manufacturing and marketing a new product like that is nothing to sneeze at.

> I thought we all agreed choice was a good thing? Was I wrong in that
> assumption?

No. While I can understand why Apple would choose to start out that way with the iPhone in a crowded new market, I am content to wait out the iPhone and see what happens down the line. Also, there are changes afoot with regulations, other competition, and available frequencies.

> I really never intended this to be a Mac/PC debate. It was just my

> nothing more. Let's leave it there please.

No, wait, your mom wears army boots and can't cook onions worth beans!
Just wanted to get that in. ;^)

Cheers,
-Jamie

Subject: Re: Latest Shelly Palmer report on Mac stuff
Posted by [Dedric Terry](#) on Fri, 18 Jan 2008 22:57:56 GMT
[View Forum Message](#) <> [Reply to Message](#)

Hey Jamie - I really didn't intend to get this far into this, and don't really have time to continue much more. I was just sharing my opinion on Shelly Palmer's report saying that while I'm sure there was quite a bit of tongue in cheek to his opening comments, he at least was pointing out why people spend more on Macs when they could get the job done for much less - marketing, pure and simple.

Just to get more to the point of options - show me where I can get a Mac desktop tower with a single quad core cpu system. It's faster than a dual dual core, but much less expensive - why it isn't a sweet spot for off the shelf systems is a mystery. It's really popular with a lot of Nuendo guys (I'm upgrading my core 2 to a quad - just drop it in and double the power - nice - doesn't happen that easily too often). Probably one that just didn't have mass quantity build appeal for whatever reason - supply of cpus, boards - who knows.

Btw - I was in Best Buy today - there were probably 20 different laptop models, and 30 desktop models there to choose from. 2 iMacs, 1 desktop, and 3 laptops. Regardless of preference, the distinct differences imho, are 1) that Apple sells "cool" better than anyone, and 2) that the others sell "choice" much better simply but putting more obvious choices in front of you (most of which are at least partially redundant of course, but it's still a marketing tactic - and HP and Sony have some seriously cool looking self-contained monitor/cpu systems with very nice wireless keyboards - including a touch screen model from HP for about \$1500 that is a blast to use). Again, just an observation.

If I could get a MacMini with the option to trick it out with 8G and a second SATA drive it would be seriously enticing for peripheral sample libraries (you need to come down and see this in action - it's a beautiful thing to offload that much processing). I know other composers that would have gone that route as well, were it not for the ram limitation. Seriously - it's a good deal for that purpose since it isn't overstocked with extras one wouldn't need for such a use, and the form factor would be really nice for stacking away in a computer room.

Thanks,
Dedric

OK, but I didn't get that from his piece, my complaint is about his illogic and hyperbole, kinda takes away from his credibility.

But anyway we can kick around the relative value another time...from a bigger picture perspective that includes initial price, capabilities, subjective feel, administration time, longevity and resale.

If it were just simply marketing they wouldn't have me as a customer.

> Just to get more to the point of options - show me where I can get a Mac
> desktop tower with a single quad
> core cpu system.

Go to the Apple store online. Take the stock duo quad and subtract a quad in the configuration options. Drops the price a bit...\$500.

But I think the default 2.8GHZ dual quad is the sweet spot this time around for value - if you can use the power. The price is significantly lower than last month, and it's an improved version (new chipset, faster buses, better graphics).

> Btw - I was in Best Buy today - there were probably 20 different laptop
> models, and 30 desktop models there

Choices are good.

It'd be even better if all those laptops weren't locked into one of the biggest monopolies (and yes, marketing organizations) on earth. As you imply, some of that choice is illusionary. But not all.

If Apple still had clones there would be more choice for OSX boxes, if Apple could have survived that (I think yes but those who justify dropping the Mac clones long ago think it saved the company).

> If I could get a MacMini with the option to trick it out with 8G and a

> in a computer room.

I'm looking forward to seeing your setup!

I don't know much about the Mac Mini's expansion options. Lessee...looks like 2GB is it.

But wouldn't an 8 core box with a ton of RAM (holds up to 32GB now) be able to keep up with separate smaller computers, and be a bit more convenient at that?

I'd prefer to have it all in one box (like I do now with the dual G5, although I'm not using some of the more demanding libraries like you are).

When I get the new laptop I might experiment with Logic's networking feature, just to see how well it works to have some instruments and FX running on another box. But the dual G5 is holding its own, so far. Might be able to hold out for a 16 core box to replace the G5, in another year or so... :^)

Subject: Re: Latest Shelly Palmer report on Mac stuff
Posted by [Dedric Terry](#) on Sat, 19 Jan 2008 00:41:16 GMT
[View Forum Message](#) <> [Reply to Message](#)

Hey Jamie - I agree completely - Shelly was venting more than reviewing.

Regarding the tricked out Mac pro vs. satellites, yes, it would make sense to go with a single machine, if the host apps could allocate a full 64-bit address space to Kontakt, etc, but from what I've read so far on the East West/Soundsonline forum, they can't (Logic included I think). That's only a matter of time though - just not sure when or how long it will be.

There may be a few other limitations to running a full blown orchestral lib a la VSL or EWQL Symphonic Platinum on a single machine, but we are getting closer no doubt. Such a rig would need at least 16G - 32 preferrably, so it's not a cheap move when there are working satellite systems already in place.

On the single quad - didn't even see that. Still a bit pricey compared to a

single-quad, single socket PC (I'm guessing the MacPro motherboard is still a dual socket with a single quad - those boards are around \$400 I think, and the single Xeon is more than the conroe Quad, which I can get for \$300). For the difference with the Mac Pro, even at \$500, I would go dual quad. It's a difference of allocating a machine for samples, or video playback (which is hard to justify in the \$2k and up range), vs. buying a host system. For a host though, dual quad would be the way to go, and I probably will this year. There the Mac prices are certainly competitive.... I just can't get Sequoia ported to Mac.....and my Adobe CS3 web suite that I need to manage my site has no platform crossgrade plan (pretty lame imho - probably the only company I know of that has either/or platform licensing).

The other issue for the time being is that Nuendo is running 10-15% faster on XP than Leopard. Hopefully that will change though. I'd love to have a 1:1 choice between them - then it comes down to fun and convenience. Mac wins there.

Btw - I really do admire Apple's attention to design, form and function and making products that do in fact set a high standard for the industry in general. It's really a great product line. Lovin' my iPod Touch.

Regards,
Dedric

You said desk top computers under 2K. Now your talking sample library machines, for pro users. Show us your idea of a sample library machine for under 2K?
I bet you can't run Mac software on out of the box with out having to hack it. You can always argue something.

>

>I had also heard the MacMinis might not be around much longer - fact or
>rumor?

Rumor are rumors.

>

>Btw - my comments were just an observation, not a slam, or hyperbole, or

>was for us) - but we're on Verizon with no
>choice to even use an iPhone, so there's a pretty big missed market for

>Apple - not my problem though, but it is a limited choice situation that

>favors AT&T even if iPhone users don't like AT&T.

It's always an insult to mac users when somebody insinuates that we are stupid

because we gullibly drink the SJ marketing Cool Aid. Apple stuff Rocks, however, not all of it appeals to me and some of it is over priced.

>

>I thought we all agreed choice was a good thing? Was I wrong in that >assumption?

Choice is a good thing. Apple will offer other plans in time. You can unlock the iPhone and use other carriers now.

>

>I really never intended this to be a Mac/PC debate. It was just my >interpretation of Shelly's comments, >nothing more. Let's leave it there please.

Subject: Re: Latest Shelly Palmer report on Mac stuff
Posted by [Dedric Terry](#) on Sat, 19 Jan 2008 01:15:17 GMT
[View Forum Message](#) <> [Reply to Message](#)

Hi James,

No intent to inflame or insult at all - let's try to be a little less
sensitive and not read into
PC users' posts.

See my other post to Jamie - I do think Apple makes a great line of
products.
The conversation really detoured way too much from the
original point, because, of course, you can argue anything, and we all tend

to read
from our own perspectives, not always understanding the intent of what we are
replying
to, and too often looking for an angle to refute the other's opinion.

Curiosity question: can you unlock an iPhone within Apple's license? i.e.,
I know it can be done, but
Apple previously issued updates that reportedly wiped out 3rd party apps in
an effort to
plug that hole - have they recanted, or is it still the same as OSX - you
"can" install
it on any hardware, but you can't upgrade it since it violates the EULA. I
might consider one
at some point if it's truly open now.

Btw - I saw a super slim/mini wireless Mac keyboard at Best Buy - not too
bad at \$79.
If I had a Mac, that would be a superb space saver esp. for studio use. My
Logitech wireless
is great and a real space saver, but not as small or thin. Really
impressive - coolest mini keyboard with
full sized keys I've seen - aluminum bed too so it seemed really solid, but
with a great feel to the keys.

Thanks,
Dedric

Don't audio unit plugins get their own address space (I don't know, just wondering)? But anyway since OSX has 64 bit memory addressing, you're probably right that over time more apps will take advantage of it.

No, not cheap, but it's probably more flexible use of the RAM than spreading it out over multiple boxes. If it's in one box you can use it for other apps more easily.

> that has either/or platform licensing).

Yep, that is lame. Luckily the Mac can run MSWindows in another, uh,
window, via Parallels or that other VM.

With the single quad, you could presumably add the other quad later to
almost double the speed. Nice expandability for anyone who's \$500 short
of affording the dual quad. But yeah, I'd buy the dual quad from the
getgo if I were buying right now.

Interesting, I wonder if the optimizations are needed on the OSX side,
if it's a Nuendo porting problem, or both.

Glad to hear you made up with your errant Touch! I hope it learned a
valuable lesson by being left at home for a while. :^)

Don't show it to me when I come over or I might be tempted to get the
next rev. :^)

Subject: Re: Latest Shelly Palmer report on Mac stuff
Posted by [Chris Ludwig](#) on Sat, 19 Jan 2008 16:12:08 GMT
[View Forum Message](#) <> [Reply to Message](#)

Hi James,
I sure wish the next Gen of I-Macs or Mac Minis come with a express slot at least. That would make them extremely attractive when it come to expandability.
All the Air needs is either an express slot or a firewire slot and it would be damn cool. The way it is now I got a feeling its gonna bomb.

Chris

Chris, I'm with you, I think it will bomb, but I think they will sell a bunch at first. It's kind of weird, even psychologically it seems like your not getting as much for the money because it's so thin. For the last year the Apple TV bombed because it wasn't HD, now it is. Hopefully they will up date the MacBook Air sooner than later. I'm glad I didn't pay thousands to be at MacWorld, what a disappointment.

Guys,

There's no way the Air is going to bomb. Cost is not a barrier to a DINK setup with tons of disposable income. You guys are thinking way way way too techie.

The people that are going to lap this thing up wouldn't even know where to stick a CAT5 cable. All an apple rep will have to do is walk into a starbucks and whip out the Air. Shit, they'll be selling the thing with lattes and a gucci bag before the end of the year, Guaranteed :-)

Chuck

Subject: Re: Latest Shelly Palmer report on Mac stuff
Posted by [chuck duffy](#) on Sun, 20 Jan 2008 00:41:03 GMT
[View Forum Message](#) <> [Reply to Message](#)

Jamie,

"Don't audio unit plugins get their own address space (I don't know, just >wondering)? "

This is a good question, and the short answer is no AFAIK... Plugins live within the resource constraints of the host application.

Chuck

Subject: Re: Latest Shelly Palmer report on Mac stuff

Posted by [Dedric Terry](#) on Sun, 20 Jan 2008 01:56:24 GMT

[View Forum Message](#) <> [Reply to Message](#)

East West's Play will use the full address space on a Mac in standalone mode, and can circumvent the limit within 32-bit hosts running on a 64-bit Mac and use the extra RAM. The host still has the limit and other plugins are limited to the usual 3.2G or so.

Afaik, this is the only VSTi plugin at the moment, other than some standalone options, that can do this.
