I had a tune almost finished. All Automation almost done. I wanted to automate effects sends and the automation would not work after I made the adjustments. Then to my horror, all the other automation to the tracks would not work either. I tried everything. Nothing works, it's like the file

got a bug and it will not see any automation information.

Can anyone help?

Mike

I never saw this behaviour myself. Ring a bell for anyone?

Are you using the regular automation or the AnalogX ParisMIDI midi automation on the mini mixer?

This may be a dumb question, but is automation turned on ? (The little "A" to the left of the track in the automation window).

The automation is definitely a little buggy, but I've never had it just stop working. I'm assuming you've quit the project and rebooted it with no luck? How about this: Copy all the automation into a new project (remember that you have to paste the automation info at the very beginning of the project and then paste your audio where it lived in the old project), copy the mixer settings (I know - you have to save all your plugin settings and re-instate them after copying a mixer - PITA, but it may take what it'll take!) and copy all your audio files to the new project. Hopefully it'll work.

Prolly a dumb question, but you didn't accidentally click the "disable all automatio" option, did you?
