ec b and the audio never dropped out and the
audio was present everytime I open a prj. So, I thought maybe the problem
with the card maybe something to do with the mec and I connected a 442 interface
in place of the mec and still get the same error with the cards not being
hooked up right. I also did a fresh install of Paris and went thru all of
the steps very carefully to no avail. The last thing that I have done was

on eds card and reseal them and paid
close attention to the interface cables on the eds cards upon launching Paris
the message that the eds card were not hooked up correctly. I pulled the
old manual out and made sure that I had the cables right to no avail. Yesterday,
I hooked up master card a to m
