Hey Aaron,

A year ago you upgraded to SP2 and mentioned that you didn't have any problems running PARIS. I've got one computer. My desktop with WinXP SP1 with all security updates and use it for all my business and personal finance software, databases, PARIS system, sequencers, Word docs, games, DVD/CD burner and the internet (minimal use for email and product software updates). I run all programs one at a time. No multi-tasking here.

Did you have any problems with the install over SP1? Did everything work afterwards? Did it mess with Interloc PACE for PARIS? Any comments would be appreciated.

Anyone else can chime in. I do have back ups for all my important files and programs and all my audio is on my D drive. I've got the CD and wish to upgrade for internet security. Once upgraded, there's no going back, right?

Thanks all,
Wayne Carson
Paris user since 97
Lurker and learner and sometimes I have a question

I had absolutely no problems with the upgrade, and I don't think that most of the XP users here did either.

My Paris box is at SP1 with NO security updates on it. Runs great when I have time to fire it up, short of a video card issue I'm dealing with. SP2 I'm relatively sure would work just fine given what I do know. I do not connect this machine to the internet. If you use Pace you will have to update those drivers to the spec in the XP beta driver install.

Aaron, What do you mean "update those drivers to the spec in the XP beta driver install"? I'm on XP SP1 with PARIS 3.0 and PACE and did the WinXP beta3 driver install, using the XP driver package and making PARIS work on XP documents from the GreatIdea website. The only problem I initially had was to disable HT. Since then it's been rock steady, since 2004. Do you mean, there are files to update for PACE or XP when I upgrade to SP2?

Martin, thanks for the reply. Makes me feel more confident about the move.

Anyone else wanna quick chime?

Thanks all,
Wayne

Nah, I simply meant to cover the basses on the standard WinXP install, just as you did with SP1. There were many users that didn't catch the installer adding a 'parispro' to the install routine when the Beta XP drivers for Paris came out.... as to PACE, there were updated drivers that needed put in before installing Paris Pro software.. 'if' you're into using Pace. I think the GI docs covered all that.

Carry on.

Just use antipace. Sheesh, you think ID has a leg to stand on anymore for us getting rid of Pace? Paris runs great without Pace. Go for it. :)

Thanks Aaron.

Jim, I've tried to find antipace. Could you steer me towards it. Thanks :)

Hi Wayne, you still need a nice clean (no pace) Paris.exe?

Robert,

I'm sorry I'm soooooo late with the reply. Had to leave town quickly and I just got back in.

Yes. Can you help?
