---

My PARIS system was working completely fine until I moved. I relocated to my new home, set up PARIS and had error code 1/1. After researching the code, I checked the connections and reinstalled the drivers several times and finally it launched. But, when I open a project, I get additional error messages and they are all different. If I launch PARIS and try to open a project 3 times, I now get three different error codes. Anyone have any ideas? I'm running a custom PC with Windows XP.
