
Subject: Interfacing a Lexi LXP-1 to a balanced PB

I sent my LXP-1 to Audio Upgrades last week and Jim Williams is doing the 480L mod right now. There is some question as to whether I will need to ground the shield of the 1/4" plug that is connected to the LXP-1 when running the cable to a 1/4" balanced PB to be interfaced with Paris input/output modules.

I didn't notice any drop in level when interfacing this way using TRS plugs before I shipped it and Jim hasn't reported any fried opamps, but I'm just curious (and I prefer my componentry raw, not fried ;o). Any of you guys have any technical skinny on the A8iT/A8oT and Paris 20 bit I/O that would indicate any reason for concern about this?

TIA,

Deej
