Yo, yo!

Attached is a new version of the FreakQ!

New in this release (both mono and stereo versions):

  - All Mid and Hi Shelf EQs now have selectable frequency points.
 - I've added output metering to check for too much gain building up from
boosting bands (and because meters look cool).
 - The low shelf has been removed because of a problem in the dsp code that
I don't know how to fix that caused massive distortion when it was used.

I had hoped to make this eq fully parametric by having a width control, but
it either isn't possible, or I just don't understand the math going on in
the algo enough to make it happen. A friend of mine who is far better in
math than I am has offered to look it over. If there is a breakthrough,
I'll implement it.

Let me know what you think!

All the best,
Mike
