Hi Phil, why win98, Mike's XP drivers are amazing.

Cheers  
Rob

I have FXpansion's wrapper which I can send you (pm me your email addy)

Senderella is more along the lines of Chuck's - Line in / Line out except it will allow you to send audio across subgroups.

You should also check out FFX-4 by VB its freeware and allows you to insert four plug ins per native insert slot...a handy thing to have if you're gonna use Senderella or Faderworks

<http://www.remixsoft.com/plugins/vb-rack-ffx16/> (second item)

Also check out Faderworks - a nice little app that provides delay compensation for Paris
