You can also just leave the vst and eds slots visible. Just close the mixer

window (little x in the upper right hand corner)
and re-open it (M)

:-)

Congrats. I went a little BBQ crazy a few years ago and ended up with a weber smokey mountain and a charbroil offset smoker. nothing like putting a butt on before you go to bed and waking up to fall off the bone smoked pork.

Jessel'm with Rod...been doin' it for years also, but that still does not negate the cool factor.

Damn that almost sounds illegal!

DonThanks, DJ.

Do you see any reason why a digiface wouldn't work?

Reason I ask is that I remember something mentioned about one particular model which wouldn't sync reliably.

(could have been an older one).

Cheers

In my manual there is nothing related to it...

I have read some posts that were saying that in copy process you cannot copy the native or eds effects but only the mixer status.

So some I guess did not know that...

Well for those, like me, I think this still counts, right ?

Regards,
Diimitrios

I hope you mean lump charcoal, not that chemical stuff. Now how the hell are you gonna get more gear if you keep throwing your money away on superfluous crap like food and the preparation thereof?
