Hey guys.

Need to a little in-the-box mastering at home for demo purposes. Would probably need all-in-one solutions for the iMac, as my mastering skills are nil and starting from scratch in Paris is not the best option.

Any suggestions?
Jimmy

I'm not a Mac user but T-racks or Ozone work great on the PC and may be avail on Mac also. T-racks is really easy to use...

DSP Quattro

http://www.i3net.it/dspquattro/asp/homepage.asp

Wave Editor

http://www.audiofile-engineering.com/waveeditor/

Peak is a standby. Waveburner is included with Logic. Studio One Pro includes a Mastering component.

I leave the mastering to the pros...they have the tools and the knowledge to use them properly - I

don't

TRex works for me as a quick tool to get some punch out of the box. Things will pop that you typically, didnt hear and it can enhance if used properly. But why not try using the stereo compressor in the master mix. It can add some breath to your mix and pump up some back ground trasures you might just be surprised about. Read some compressor tips and try it out.
