Not Paris related, but I can find nothing on the internet and thought maybe
someone in this group could help out.
I've got a client whose trying to convert .wma files to .wav files and then
burn CD's with the .wav files. Her operating system is OS X 10.3. There
are solutions out there, but they seem to all require OS X 10.4 or greater.
Toast might help, but I seem to need version 6.0, not the latest, and I'm
unsure if it converts .wma to wav, though it clearly will burn CD's.
Thanks gents.
MR

Hi Mike,

Check this out:

http://www.ntius.com/dragon_burn.asp

States 10.1.4 as the minimum OS.

Sound Forge 8 has WMA conversion capabilities, and it comes with
CD Architect, but I don't know if they have a Mac version?

Do you happen to have any app residing on a PC that does this?
If so, what about just dumping the WMA's onto a CD-R & then
opening it on a PC & doing the rest from there?

Neil

Thanks Mark! This looks very promising. I could not for the life of me,
find this sort of stuff. Awesome.

Hey Neil,
Thanks for the response. This particular client only has a Mac. I have CD
Architect, which is a great program. I thought about encouraging her to go
for this, (if it even runs on a Mac -I'm not sure either) but wanted to try
and find a less expensive solution for starters.
Thanks again man.
