I'm about to get a HD, probably 160G, for a new improved Paris Rig (in a Mac MDD). Any opinions?

thanks

After spending all of this week recovering a drive that died, I have vowed to only ever buy Seagate drives again. All the ones I own have been solid over the years.

All the ones that died have been maxtor or hitachi, possibly western digital..

Cheers,

TC

I use WD, Seagate and Maxtor. No problem with WD or Seagate here. Maxtors were a bit dodgy for a while, but I haven't had any problems with the ones I've purchased in the last year, unless I used the Maxblast disk corruption software.

The one that died on me this week was Hitachi, and another Maxtor has become corrupted this week. I shouldn't really say anything about Western Digital, since I can't really remember.

Also, didn't Seagate buy maxtor or something like that now?

Maybe it's just luck of the draw sometimes..

Cheers,

TC

Hitachi eh? I've got a 250G Hitachi SATA 7200 on one of my DAWs right now for streaming VSTi samples. Seems to be working nicely.....which means that tomorrow it will probably go belly up. I've got all my samples backed up on a 400G WD.

Hope that one doesn't die too.

I was thinking that hitachi and IBM deathstars (deskstar) were somehow related, and to avoid both... anyone remember the details?

BTW, Deej - did you get my message about the CD making it out last week for DT's?

For some reason, some messages haven't been getting through here. I even mailed you a manual for your TLA preamp that I found the other day and that was returned in the mail. If it wasn't for the fact that DT told me that he got the CW v4.5, I'd be wondering if you were just a filament of my

exaggeration.

IBM squared off with consumers on one of the deathstar products. It was only the 75GB drive that notoriously failed. A class action suit filed about 3 years ago. But as things go when a class action suit files, people don't pay much attention to the product name, but rather, to the product maker. Who here can recollect the part number for the Georgia Pacific siding that swelled and fell off a million houses? Not many.... maybe near zero. Who here has heard of Georgia Pacific and their crappy siding? Most if not all.

That said, I'd never buy an IBM drive until there was consensus here or at some other trusted mass that these drives are solid.

I think Hitachi made the media for the IBM drives and a few of the internal moving parts. Hitachi makes everything from straight pins to locomotives to marine oil tankers.

Yes, IBM sold their hard drive division to Hitachi, I think IBM retains a
vary small percentage of hitachi stock. Most of the IBM's were good. They
had a run that was bad though. The hitachi products have been marginal.

There is a way to tell by the shape of the drive if it's an original seagate, or a re-badged maxtor.

You may want to google that to check and try and get an "original".

Cheers,

TC

Alright, Seagate it is. Thanks, all.

I noticed a few Maxtor drives on the Seagate site, so I assume they got bought up....

Hmmm...I googled but didn't find how to identify a real Seagate. I see that Circuit City has Seagate 160's on sale for \$45 after rebate--wonder if that's the reason?!?!

Guess I'll Google some more
