fairly brief,
think this would work?

So wiht a tone it is safe to adjust them? is there anything wrong such as sound degradation with turning em down otherwise? I'd ratehr not have to always go into a compresor to turn the gain down. I also want to be able to push the pres a bit more.

Again, thanks

>You will need to feed them a tone that can be adjusted from the device
wsending the tone so that you can calibrate the Paris channel level to the
dB level that is feeding the Paris A/D converter. If you are feeding the
converter a -10dBu signal you can then adjust the trim screw until the level
reads -10 on the channel meter. There may be a little fudging going on with
the software in favor of keeping the signal around 2-3dB below *actual*
decibel input....but I wouldn't know this for sure. IU would suggest feeding
it a constant test tone from an external device.

<http://www.silentpcreview.com/article272-page1.html>

Here is the page with the hard drive mounts, it's kind of like a shock mount
for a microphone. This will give all of us some ideas. As you can see,
it looks like you could put full size PCI cards in the case with out modification,
but you might lose some hard drive spaces??? I guess you could modify the
case to your needs.

<http://www.silentpcreview.com/article272-page4.html>

Looks like my next case.

.....you still have hair?They do sound nice, don't they? Funny, the C460B's got a bad rap
years ago
because some of the units exhibited distortion in the head amp and required
a mod to fix it. Jim Williams does a pretty well known mod to these mics
that is supposed to help them along. I never heard a problem with mine
(purchased in 1997) and I like whatever it is that the circuitry imparts to
a source, though it may be that there is a little harmonic

distortion.....it doesn't seem to impart anything nasty, at least with the units I have here. The C460B's were discontinued.. The newer incarnation is the C480. The capsule is a cardioid capsule labelled CK1.

's. (hell... I was young, and this was around the time when the development of digital sampling, and synths in general, was progressing in leaps and bounds). I think it was "Electronic Musician", that reviewed the cumbersome looking machine, which could tap into your brain, (via electrodes, I think,) and could produce an approximation of any sound you could be imagining at the time.

Alas, I loaned my copy of the mag to someone, and never saw it again.

This happened here in Boston last night

<http://www.cnn.com/2005/US/12/14/boston.shooting.reut/index.html>Sure did, it fixed it.

Not saying that it will work for you, but worth a shot IMO.

You could also use the opportunity to experiment with different valves for different sounds (brighter/darker).

I wouldn't go as far as spending a mint on NOS Telefunksens, though, I have read that even those were subject to quality variation, and thus are just as prone to sounding like poop as any other manufacturer.

I bought a few Mullards from Britain (a couple of spares), and the one I used

didn't change the character appreciably, so the two mics still sound VERY similar)

What mic are you having problems with?

The mod is well worth the money, although he does remove the transformer, which some not like. I think the real source of the great sound here is the capsules themselves. Stephen Paul once told me on the phone (he was very generous with his time) that the capsules for this series was the only thing AKG was currently making that was good....I had the same issue a couple of weeks ago, but it was (I think) a PTLE system. The files aren't sd2, or at least wouldn't translate as such (no file extensions there either - adding extensions didn't work). No luck. Fortunately the other songs had bcast wave files or aif. I don't know why the studio couldn't keep one file format.

I tried importing the files into Audition (CEP) since it can read both byte ordering formats as well as raw pcm formats - no luck either - just noise.

If you don't have any luck, I would impress upon the studio the fact that no one masters in ProTools and you need a format the rest of the world can read.

Regards,
Dedric

hard and software. I'm pretty close with one or two, and I'm waiting to hear whether anyone I know was involved. It's going to really suck if so. Boston is not a laid back area to begin with, and the cold weather makes it worse. Sitting in front of a big heater,
Ben

Stephen was fun to chat with wasn't he? I once spent 3 hours on the phone with him (on his dime) shooting the shit about mic'ing up drum kit in his living room. He followed that up a few days later by mailing me an article he wrote for some magazine called "Zen and the art of drum mic'ing". Hell'uva nice guy and an incredibly deep well of knowledge.

;o)Bummer. I'll betcha when all is said and done, it turns out to be drug related.

I'm trying to get inspired to work the ole Paris again and was wondering if any of you would be willing to share your music with the group. It seems like a lot of you have really taken the Paris to the highest sonic levels and I would like to hear what you all are getting.

If you wanted to take a small portion of some work and keep it as a wav file that would be really great. I'm hoping that hearing some good tones will inspire me to get back into it.

Much appreciated.

Barry

p.s. music that has vocals would be preferred. thanks. The talented Jason Miles CD will surely fire you up.
