Bummer. It's being said that it's the warmest it's been in the last 1000 years. I believe that may be true, though I remember the 50's and it was incredibly hot back then too. Hotter than it seems now, but maybe that's because I was young and impressionable. My question is, why was it hotter than this 1000 years ago?

I thought this was pretty christmasy.....

but hey.....it's Christmas eve.....let's see how bummed out we can get and how miserable we can make everyone else.

After googling the island name, I ran across this seemingly conflicting report that the island was submerged 22 years ago.

Wonder where the truth lies?
Either way... interesting stuff...
