I'm encountering this error while working with virtual submixes:

"Error recalculating submix - the file already exists". Does anyone know how to get rid of this? Would be nice if it told me what file it was referring to. It's getting frustrating...

Cheers

Kris

Sometimes PARIS gets confused about the audio files used to represent its virtual submixes.

- hit "A" to call up the Audio Bin and delete all submix files (they're the "greyed out" files)
  - make a new folder
  - go back into PARIS and change your record path to that folder
  - save your song
  - hit "recalculate all submixes"
  - (if you have multiple virtual submixes) grab a coffee.
-

Thanks Kerry. I'll give that a shot.

The virtual submixes are getting frustrating. I'm considering doing the RME + Reaper thing for tracks that exceed my EDS track resources.

Cheers

Kris

Virtual submixes are a PITA. Might be a dandy time for another EDS card, they can be had for

little over \$100. Great "bang for the buck" upgrade.

I'm at 3 of them already, and don't have space for a 4th. Not looking to get into expansion chassis....

Cheers

Kris
