---

I have an old JV1010 that I use with my Synthophone and I understand the only way to upload patches into the user bank is with some software that I can't seem to find anywhere. Is this true and does anyone know anything about this? If any of you have a copy of it could you shoot me up a copy of the file? Is there any other way to load patches into the user bank? This newsgroup is so full of tech and midi experts someone has to know something about this?

Appreciated,  
Rich

I think the editing software is called SoundDiver.

I have that around here somewhere, but to be honest I loaded it years ago,

was underwhelmed and removed it. I'll see if I can find it and shoot you a disk.... it's rigged to only work with the JV1010 so it's not like there should be an legal issues.

SoundDiver was an EMagic product, and since they were purchased by Apple, I doubt it's available for Windoze anymore, but if you're on Mac (or have access to one for patch loading), here's a link to two Mac OS versions of it:

<http://www.macmusic.org/software/view.php/lang/en/id/1534/>

Thanks, Neil. Appreciated but unfortunately I'm on a PC and won't be able to use it. Maybe I'll get a Mac now :-)

Aaron, thanks. It figures that you'd be the one to save the day. Look that  
bad boy up and shoot me a copy if you would please. Can you email me the  
file or do you need to send it via snail mail? I need it as soon as  
possible. I'm trying to program a foot midi foot switch to control patches  
for my synthophone for a gig a week. It may take me that long to figure the  
thing out, LOL. You da man. I owe you.

Thanks,  
Rich

I made some grammatical errors. Let's try again. Aaron, thanks. It figures that you'd be the one to save the day. Look that bad boy up and shoot me a copy if you would please. Can you email me the file or do you need to send it via snail mail? I need it as soon as possible. I'm trying to program a midi foot switch to control patches for my synthophone for a gig I have in a week. It may take me that long to figure the thing out, LOL. You da man. I owe you.

Try this: Changelit for the JV1010

<http://www.planet-groove.com/programs.html>

It's been years since I've used it, but I remember that it worked just fine.

David

<http://www.synthzone.com/roland.htm>

Might get you where you wanna be man also, and I think I remember there being some kind of download on sound diver at Rolandus.com... meanwhile I'll look in my stash for that install.

Aaron, I downloaded Changelit but haven't had a chance yet to figure out how to work the program yet. If you find Sound Diver I'd still like a copy of it if you don't mind and it is appreciated. I'll let you know as soon as I am able to do what I need to do with Changelit. I won't be able to get to it until later, planning on tomorrow, as I'm in the middle of mixing my project for the cd release.

Thanks, Aaron,  
Rich

Really Mark, that would be great. Aaron is looking for a copy but hasn't found it yet. If you wouldn't mind shooting me a file over the net if that is possible or just plain snail mail. I'm trying to meet a deadline as I have a concert on the 16th of March and need to have my pedal programmed by then. I really appreciate this man.

Thanks,  
Rich
