I have sent the 2 buss to an Alan Smart into a Studer 1/4" 2 track. No need to bring it back into Paris in this scenario. Others have sent out to a Finalizer and recorded into a CD recorder @ 16/44.1 to achieve dither and SRC in one pass.

I also send via Aux, groups to external verbs, out and back through S/PDIF. I have also sent out to compressors/eqs the same way, recording back onto 2 new tracks. Just need to be careful about muting existing sends, or there are big time phase issues.

Ted
