.com... or something like that.

Some of them are a little average though. Despite the corn, I was a fan of the one about making sure you have a car... ;o)

Cheers,  
Kim.I believe he already stated that he checked the jumpers.

I just recently went through kinda the same situation. Getting blue screen or total lock up and finding the culprit is very frustrating. I thought it was my motherboard. Replaced it, with new CPU and memory... rebuilt a computer with the old motherboard and it worked perfectly fine. Come to find out... it was the video card (an ASUS). Totally had me baffled and cost me over 300 bucks. Never again will I buy an ASUS product!

Anyway, what I would suggest is to start with this tactic. Remove all your components. Boot up and see if it's ok. If so, then start putting components back in, one at a time to find the culprit.

My experience with windows is that I never rely on the BSOD message. But I used to get that "VXD" message occasionally when I use to use Win98. It usually meant a hardware problem. I use Win2000 now and I will stick with it, pe

>Hi, all.

I too, will be building another comp soon. But only for Paris. Thus far I was set on the Gigabyte Ultra 939, but I have read various posts about others having success with the Epox 9NDA3+, and Asus A8v.

I take it that Dual core is a no go with Paris. (?).

Thanks for any clarity you guys could shed.

Download pdf versions of the Paris manual if you haven't done so, Joe.

Haven't used it for that, but the only problem I could see would be having to take the computer, mic, etc to the piano. Seems like a stand-alone tuner might be better if you do that a lot.

I very much agree with the idea of getting it right as I'm tracking. For my ears, quality outboard is unbeatable. I've never used a RNC. I can safely say my records only got better when I stopped relying on the computer to add vital colour to my sounds.

Cheers

> >Lance,

This is what I'd try:

- 1 If 98 drivers came with the DVD go into safe mode and install them

- 2 Reboot and see if your results are good. if not:

- 3 Backup you windows 98 directory and the system state to one of those extra hard drives you have

- 4 Boot off the Win98 Cd and go through the process of installing 98 over the top of itself. If a system file it "poached" this will replace it. Of course it will also put all the standard stuff back as well.

5 Boot again and see if it fixes the problem. If not, call tech support (actually you can call me and we can discuss further if your stateside 503-704-3701). Availabel 'til about 3pm pacific, then again later.

>John,

Thanks for being geneous with your time and efforts.

I'll give this a try.

I'm going to do a pretty big backup while I take a break from this.  
Then start reinstalling 98 later tonight or tomorrow.

I've rebooted so many time I feel violated. Worn out.  
Plus I have a gig at 8 pm EST and I'm not sure how much I can pull off before I leave.

This will all seem doable after I finish the backup.

Thanks again!

My 2 cents.

de ASAP!

Although I had to work with 3 people at memorex to get this together, they  
all  
bent over backward to help me.

Thanks again and have a great weekend.

I re-installed nero, loaded a pat metheny dvd and bang. The same crash happened.

So I took the nero off for the time being.  
As long as I can work the way I did before I really don't care.

I'm emailing memorex to see if they have a remedy. If not,  
I'll return the new burner, and stick with IDE drives as backup for now.

the cd until we had eradicated the software and got the old drivers back.

deal. ....I'm literally knocking on wood as I post this.

Getting ready to install my Magma host card and all of the other peripheral crap now so we'll see if the IRQ fireworks begin.

;o)

Hehe... [snigger snigger]I just did that Deej  
I installed a new C drive that already had an XP operating system on it...  
Major heartache..I ended up having to reinstall XP....Pain....

>Hey DJ,

I wish my upgrade had gone as easy as yours appears to be going. I kind of jumped out on a limb as I was in a desperate situation on getting my system back up and going so I let the local computer store talk me in to going with a intel processor and msi board. At first it was really crazy but tonight it looks like it is settling down and seems to be solid. Tomorrow I will record tracks and push it around and see what happens. I am looking for a Directx deesser plugin that will work with Paris. Anybody

Thanks

David P
