Hello, Paris family

I need your help finding a Magma chassis which will work with my two EDS-1000 cards.

Am I right in thinking none of the current Magma products support 5v slots?

Having already bought a 6 slot Magma chassis, I am wondering where to go next. I've e-mailed Magma to find out if any of their current range support 5v.

There appear to be some backplanes on view on eBay which would fit, but they mostly don't come with iPass cards, PSU etc. It's the Digidesign/ProTools models which look like they could work but I'm not sure about this.

Could we perhaps get a list of models which do work?

Thanks for your help,

Nuobu
