
Subject: EDS-1000 + new PC cases

So I went to look at a PC for my Paris system - looked like a good deal. Had 5 alleged PCI slots, lots of features, software, power. But it was a mid-size case that in no way shape or form could handle EDS-1000 cards. So the guy has a bigger, faster machine there for only \$200 more (\$550 as opposed to \$350) in a huge, cool looking allegedly full-size case and IT wouldn't fit the EDS-1000 card. The supports for the hard drives got in the way. Any suggestions for a new case that can handle the size of these cards? I have a Magma 13 slot but it's attached to my old Mac and, to start with, I'm going to have to run two systems, so I either need to fit two cards in the PC or I'll need another expansion chassis.

Thanks!
