It's being more trouble than I thought. It turns out I had missed one of the 40+ parameters when I did my interface, and now that I've added it in, the thing doesn't want to load anymore.

I take back what I said about Matt's reverb. I think his prowess may be necessary.

Cheers!

Mike

Mike,

I was gonna tell you that he worked on it for almost a year, it had major nasty bugs and bluescreened and stuff for a long time. It was stable in the end, and the presets give you the equiv of a DP/Pro verb. Plus the gui he did is slamming. Since I haven't heard from him in over two years I figure it might be ok to go ahead and let it out.

Great Chuck !!  
And if he comes back we will donate for that !!  
We are all waiting for this reverb release !  
Regards,  
Dimitrios

Hi Chuck,

I managed to get an afternoon off, and I got the reverb working!

Unfortunately, my GUI is horrible and I have no presets. I couldn't find a way to get multiple pages working with the radio button on a standard layout page. If you've got any tips, I would really appreciate your help. :)

As for the DP Pro, as far as I can tell from the manual, the "Big Verb" is

actually a slightly different algorithm than the verbs in the DP PRO. The Big Verb has no modulation parameters, and the Expert Verbs do. The Big Verb also has the 16 stereo predelay that the Expert Verb doesn't have.

It would be ultra cool if Matt actually decompiled and modified the Big Reverb to make a clone of the DP Pro algo.

Let me know if you have any tips for the radio button/ multi page difficulty I find myself in.

For what it's worth, the crashes seem to have been from a faulty indexing scheme.

All the best!

Mike

Subject: Re: Hi Chuck..about the reverb....

Hi Mike,

The "big verb" is a different animal from what I'm talking about. Matt ported two DP/Pro verbs directly from the DP/Pro ESP2 source, wrote UIs and translated the presets from the original DP/Pro preset files. The originals phase cancel with the Paris versions when used on the same audio files, and same presets.

The verbs matt did definitely have the modulation.

The world is a better place than I ever imagined. :)

Is there any way I could get any of the additional DP/PRO source?

All the best,

Mike

Do you mean to say I didn't post it? I thought I did. I have the complete DP/PRO ESP2 code. You can have it all. Let me run downstairs and see what I can dig up tonight.

Mike,

I can not wait. !!! =20

I am loving having a 4 band eq in the aux bus now. Nice for the reverbs =  
for sure.

I hope you have time to use your own effects?!

Tom

"Mike Audet" <mike@....> wrote in message news:4734c21e\$1@linux...

Thanks so much, Chuck!!

I'll finish up the big reverb. It sounds really, really good in its =  
own

right. I have a plan for simplifying the interface. As soon as I get =  
that

done, I'll release it, and move on to the next project. =20

Those e2 files are going to keep me busy for a long time. :)

Cheers!

Mike

Hi Tom,

It's great to hear that the EQ is getting used and making a difference. :)

I was thinking of eventually doing a 2 band version just to use fewer resources if 2 bands are all that's needed. Mind you, now that Chuck has posted all the DP/Pro effects, I've got a much longer road map to work through!

The reverb sounds really nice. It just blends in with the direct sound exceptionally well. It's got over 40 knobs and barely fits on a 1280 x 1024 screen - not so good. I'm going to rewrite the GUI so that one knob controls which of the 32 early reflections you are trying to edit, and a second controls that reflection's settings so that 32 knobs can be cut back to 2 or 3.

It will probably be done by the end of next weekend.

Glad to hear your PC issues are behind you!

All the best,

Mike

Subject: Re: Hi Chuck..about the reverb....  
Posted by [Dimitrios](#) on Sat, 10 Nov 2007 07:28:23 GMT  
[View Forum Message](#) <> [Reply to Message](#)

Hey Mike !!  
I have sent you thre-four emails but all these are coming back after 12-24 hours as fatal error addresses !  
So thanks for sending reverb and trying here is some suggestion :  
Hi,  
Thanks !!!  
Great reverb !!  
Don't use 0 for ER1-16L

Don't use Reverb sixe 0 !  
Don't use ER size 0  
As a matter of fact anything xL cannot accept 0.

Don't use reverb size 100% as this makes the ooposite of big reverb...  
Use a start all at 12 o'clock ER send 100%  
Difusers 50%

All ER1-16 all at 12 o clock  
All DF1-4 at 12 o clock  
ER size 100%  
ER slope 100%  
ER shape 100%  
RV Low 50%  
High decay 100%  
RV Mi-decay 4.200

difusers 50%  
reverb size 30% and over  
Direct send 0  
Direct out 0  
ER send 100%  
Er out 20%  
Reverb out 75%  
Predelay 0.003

Dimitrios

Subject: Re: Hi Chuck..about the reverb...  
Posted by [Mike Audet](#) on Sat, 10 Nov 2007 20:52:17 GMT  
[View Forum Message](#) <> [Reply to Message](#)

Hi Dimitrios,

Thanks for checking this stuff out! I'm in the middle of moving, so I didn't even have my speakers set up yet. I was trying to get a default preset working with headphones only, and started to go crosseyed.

I caught the zeros problem, too, and I've fixed that by not allowing zeros anymore. I'm also going to change the maximum reverb resonance delay to .1 seconds. The Dp/Pro allows for .2 seconds, which is what I was basing my UI on. But, you are right - anything over .1 sounds crappy to say the least.

I'll check what's going on with my email. That's a little worrying.

All the best!

Mike
