Holy Crap!

First, I met with Ted this afternoon to work on the Liquid mix. He'll have details, but it was a lot fun.

After he left, I kept playing with wrappers, and I discovered a way to get UAD plugins to run under PARIS with 2.9 ms latency.

Thanks so much to Demitrios for putting me on to FFX4. Here's what I did.

- 1) Disable DX in PARIS
- 2) Wrap the UAD plugin with the DirectiXer wrapper. Inside DirectiXer is a setting under the options tab called "use equally sized buffers." Click that so that it is on.
- 3) Point the PARIS VST path at FFX4.
- 4) Run PARIS and open your wrapped UAD plugin under FFX and voila, 128 sample buffers.

I've only tried this so far with the LA2A, but I loaded up 8 instances, and they seem to all work fine.

I'll post back when I've tried some more plugs.

Holly crap!

Mike

Ok, I tried it with the VCA VU, and it worked, but I could only get 4 copies running before the audio started crapping out. I don't know how I got 8 going because I can't repeat that - maybe in my excitement I got mixed up.

It looks like I can only get 4 copies going no matter what, which may be one per card. It's still cool, though.

Mike

Holy crap indeed - I might have to weaken and get one of those puppies. Welcome back!
