Here's my latest build. The locking of the C16 UART appears to be complete.
I had missed a bit in the last build.

The next steps will be locking the IF2s, tracking down the intermittent inability to find the interface on the master card, and locking any further synch queues that I haven't gotten to yet.

Cheers!

Mike

PS - please test this is you can and let me know how it goes. If you have a P4, just turn on hyperthreading.
