functions will disappear - in some cases replaced by new
ones with a completely different focus and mindset, and in other cases, not.

Regards,
Dedric

Ciao,
Rich

"The world wishes to be deceived." - Sebastian Franck (around 1500 A.D.)Does anyone else see the funny typo in Chris' response. At least I hope it's
a typo! ;>)
Sorry, but when I read it I couldn't help but laugh. Don't feel bad Chris. I
type too fast sometimes also.

Tony

"Tom Bruhl" <arpegio@comcast.net> wrote in message news:42c4c767@linux...
Pete,
Here's Chris' response.

Hi Tom,
If the on board video is shared then I don't think it would be worth
while for audio work. I would suck balls for gaming!
It should be fine for Internet though. It is probably a Via or SIS chip
set which can also be an issue. Also the power supply is at best 200
watts and probably not replaceable with a standard atx one.

Chris

>Keep in mind that the ASUS PCI architecture has been pretty consistent. If the new card is like my ASUS A7V8X, the it will likely have PCI #2 and PCI #6 hard wired to the AGP. This makes them virtually unusable for audio/DSP cards. PCI slot #4 will likely not be sharing an IRQ with any other slot. PCI #1 will likely share with PCI #5 and PCI #'s 1, 3 and 6 will share with various other onboard components/controllers such as the IDE, USB, SATA, etc.

I'm running 3 x EDS cards on my ASUS A7V8X mobo in PCI 3, 4 and 5. Adding another EDS card or somethinglike a UAD-1 or Powercore would require the addition of a PCI expansion chassis. My Paris rig is extremely stable, but before you buy an ASUS mobo, be sure to find out what PCI slots are hard-wired to what IRQ's.

The ASUS mobo's/VIA chipsets have been extremely stable for me, but they are limited in some ways as described above.

Good luck,

Deej

>OK. Thanks heaps for that rundown. That gives me some major things to look
into.

I currently only have two EDS cards, so I imagine I could get my system running
on that board, but I'd like to buy a third and have the option of adding
a DSP card like a UAD in the future too, so I'd be dissapointed if I couldn't
make audio use of at least 4 slots.

I'll go a looking into this and see what I can learn.

I don't suppose you anyone knows a MB manufacturer who actually does thigs
properly and gives you seperate IRQs for each slot, or the option to change
them? I guess I'm dreaming...?

Cheers,
Kim.

>Erghh... the pain...

On the K7V...

According to this website: http://www.xbitlabs.com/articles/mainboards/display/asus-k7v .html

"Among theavailable Setup settings you can find manual assignment of IRQs
to PCI slots, multiple memory timing settings, AGP 4x andFastWrites mode
enabling/disabling function."

And according to this website: http://www.ixbt-labs.com/articles2/roundupmobo/asus-k8v-delu
xe-k8t800.html

"BIOS based on AMI 2.51" features include "PCI Manual assignment".

Yet I can't find any such info on the A7V.

When I check the manual for both, both of them say:

PCI 1 & 5 share with Firewire and video
PCI 2 shares with LAN
PCI 3 shares with RAID and SATA
PCI 4 has it's own interrupt.

From the way the manual is written I'm guessing when they say you can allocate
interrupts, what they mean is that the sharing is hardwired, but you can
make, for example, PCI 1 & 5 & Firewire and AGP all use 10, or 11, or whatever
you want, but they're stuck together...

.....erghh... back to the drawing board...

Cheers,
Kim.

>go paris !Hi, I'm looking for some stands so that I can position my monitor speakers

on my desk about 20-30cm higher that they would otherwise be. Ideally inexpensive! They're nearfield monitors (Dynaudio BM5s) so they're faily small (footprint a bit smaller than standard A4/letter writing paper). Suggestions greatly appreciated.

Thanks,

Danyes Windows 2000 sucks balls to put it in technical terms.:)

Sick with 98SE unless you need to use some app that won't work on it.
Other wise use XP Home.

Chris

Well fine then. I make one little mistake and everybody gets on my back.
It's like if I said that IRAQ had weapons of mass destruction or
something jeez.

>Hi Panic,

I'm sory, I wish you could record MIDI into the SPDIF. But, midi is midi,
and audio is audio. There is no converter.

I'm also sorry that I didn't read your post more carefully. I'm not sure
what MIDI sequencer will do the job on the Mac. But, using a MIDI sequencer
is the way to do it.

PARIS should generate Midi Time Code, which the sequencer will lock to.
The sequencer will then, from the MTC, generate MIDI clocks for your sound source. This way means you can avoid PARIS Midi, too.

Good luck.

Mike

I'm guessing this wont fit EDS cards. Can someone who pulls their system apart often and really knows the size and shape of EDS cards and MBs confirm that you will or wont fit EDS cards into slots 1, 2 and maybe 3 on this board...

Cheers,
Kim.

---=_linux42c7282e--Thanks for all the thought and help you put into this issue.

I just wanted to play my guitar and now I gotta buy all this stuff...

grrrr

I may still buy the AdrenaLinn and see what I can do with it...

thanks again

Panic

ipset with Paris, or am I
about to become a guinea pig...? ;o)

Cheers,

Kim.Far as I can tell the only real difference between PCI 2.2 and PCI 2.3 is that in 2.3 they no longer supply 5V to PCI cards. That's the only difference anyone has really named as far as I can tell.

They even still use the 5V slotted PCI connector, and accept 5V signalling, but don't supply 5 volts to the cards.

Seems downright stupid to me, or am I missing something?

Cheers,
Kim.the 250GB NForce3 if it makes any difference, but any experience would be valued.

Cheers,
Kim.

---=_linux42c7dee0--yep... started my holiday a little too early....
what do you mean put the cap back on, this nectar comes
in a box my friend.....

if anyone needs a Drawmer DS 201 dual gate, or a pair of
Genelecs and a subwoofer, there is a studio here in Austin
that put these up for sale on craigslist. Mind you i don't work at the studio
or have
any affiliation, just thought if anyone wanted a nice 4th of July
present..... good price on the Drawmer gates.
http://austin.craigslist.org/msg/82191045.html

That's certainly true... in the case of my Pharaoh Hound
there's a whole 'nother set of issues; if there was a handbook
for being one of these dogs, it would read - in part - something
like this:

The moment your owner isn't looking, jump the backyard fence
and go roam the neighborhood... any fence less than 8 feet high
is subject to jumping - remember, your owner put it there
solely for your enjoyment & sport, so take advantage of the
challenge it presents!

When your owner realizes you're gone & goes looking for you, DO
NOT, under any circumstances, pretend you even know him when
he tries to call you over... he will get a kick out of your
mischievousness & will no doubt enjoy the challenge of this
game.

One of the objects of this game is to make your owner get
out of the car & try to get the leash on you at least three
times once he's found you and is trying to get you back home;
you will get three points for each failed attempt on his part.
The goal is to score 25 points total - you get one point for
each foot of fence jumped, three for each failed attempt to get
you in the car, one point for each time you start heading
towards him when he calls, then turn & run when something else
grabs your attention; plus a bonus of three points for each
time you come within 2 feet of the car & then decide to take
off again. You may return home or actually get in the car when
you've reached 25 points - or get bored of playing, whichever
comes first.

When out on one of these excursions, you must always remember

to scare the crap out of at least one young couple pushing a stroller by running up to them at a minimum speed of 30 MPH. Do not saunter up to them casually, as that might give them some kind of clue that you're actually quite friendly. The fun portion of this event is to make them think you're going to eat their baby, causing your owner great embarrassment & forcing him to apologize profusely. Don't forget to lick their baby's face... make sure you wag your tail during this portion of the event, or they might take it as a threat & send you to the pound. In this game you must score 40 points before you can go home. You get one point for each mile per hour at which you run up to the couple, two points if you make the mom cry, five points if you make the dad shit his pants, and three points for making the baby giggle when you lick his face.

When your owner takes you to the baseball field to chase a frisbee, you must be sure to chase anyone who opens the gate & comes in to run around the field for some exercise - once again, DO NOT give any signs that you might be wanting to have fun & join them on their run; you must do your best to make it look like you're trying to hunt them down & kill them. Don't bark or anything like that, because most humans can tell the difference between an excited/happy bark & a mean growl. Be completely silent... that way you: A.) give them no clue as to your intentions if they see you barreling towards them, and B.) You'll freak them out completely if you come up behind them quietly & they suddenly notice you running next to them. You are allowed to run a maximum of one lap with each individual, if you so desire, then you must return to the primary activity of frisbee-chasing.

When participating in the above events, remember that fences at parks & baseball fields qualify as potential things to be jumped, too - that's the reason the city put them there, right? However, since the streets near those areas often have more traffic, jumping them can be dangerous, so you'd be smart not to; but nevertheless, you must keep your owner nervous by eyeing the fences regularly as if you're THINKING about jumping one.

Finally, at least once every couple of weeks, you must steal one object from your owner & hide it... he is most vulnerable in the morning, when he is getting ready for work - a shoe is a good thing to steal at this time, as he will no doubt sometimes make it easy for you by placing the pair he's getting ready to wear on the floor, or perhaps on the bed, on the ottoman, etc. It doesn't matter that you know he has to leave shortly... after all, you've got all day! Just grab the object the moment he's

not looking, and hide it... taking it out of the room completely is best, but sometimes you can get away with simply stuffing it under the bed - at which point you are required to sit there looking up at him & wagging your tail; this conveys the message that "it's game time again"! Other good things to steal are:
**A screwdriver, when he's working on something & sets it down next to him.
**A sock, when he takes some clothes out of the dryer & one falls & he doesn't notice. Do not chew on it, however; that sort of thing is for other breeds.
**The TV remote.
**Important paperwork, such as the phone bill. Unlike articles of clothing, paperwork may be chewed upon.
**Any quantity of food that is placed on the counter that exceeds the number of people that the meal is being prepared for - after all, if it's extra, it must be for you, right?
Don't be a pig, only steal a little bit - that way they may not notice it. Also, don't forget to be picky... for example, raw chicken is good for you but cooked pizza is not.

:)

While all of this is true, his counter-surfing behaviour is pretty weird. My daughter is the one who'll leave stuff out on the counter & forget she put it there - one day he grabbed a piece of chicken that she had set on a plate after washing it, then walked away. He could've easily taken & eaten all four pieces, but he only grabbed one. Another time, she left half a pizza on a plate on the counter, then left for work after she ate - he didn't touch a single piece & it was there for at least four hours until I got home.

Strange dogs.

NeilInteresting.

All I need to do is record MIDI from the AdrenaLinn during the pass while tracking drums from it, then output the MIDI to clock the AdrenaLinn while tracking guitar.

Questions

Does FreeMidi/OMS follow Paris with SMPTE TC? How is this implemented under Paris?

Where do you get it FreeMidi/OMS?

How do you get the MIDI in and out of the Mac and record it while
tracking?

thanks

Panic

can discern the hidden demonic messages in *I've got Friends in Low Places*.
Funny, the first thing I put on this morning was to rip one of those Joan
Osborne CD's you sent me. It sounded so wierd that I figured the rip had
corrupted. Beware the MEC. It sits there and generates 48kHZ timecode no
matter whether the computer it's hooked up to is on or not. If another sound
card in another computer is hooked up to it, it's gonna' be chipmunk time.

;o)

BTW, I heard Mustang Sally on the radio yesterday. It's still one of my
favorite '60's recordings. Man, that B3 really growls.

Hehe... ah, what a worry. ;o)

Cheers,
Kim.Yo Gene!

I remember you saying that you were doing this because you wanted to run some stuff on the master bus... applied to the whole mix.

Is it possible to do this and still be able to use your solo buttons in the first box?

I am set up like this....

i have an external insert loop setup on the global master. it is routed to channels 1 and 2 of my RME card. the output of channels 1 and 2 (RME) is routed back to the global master insert... and the loop is complete.

now when i set up a track in SX... and hit the monitor switch... and can hear the mix with native plugins across the whole mix.

problem is.... the solo buttons don't work.... when i solo something i hear nothing. i guess this is because of how everything is looped.

anyways.... Gene... you have mentioned that you do this... so i am curious how you set it up.

anybody else can certainly chime in as well.

thanks,

Yes, I remember you recommended this board to me a while back. I had it pegged as my new board, but as it turns out that board has PCI 2.3, and I'm 90% sure that Paris EDS cards wont run in anything past PCI 2.2. Hence I've had to look elsewhere. PCI 2.2 is the last one to fully support 5V PCI cards, and I'm pretty sure that's what the EDS card is.

Until I worked that out, that board had my name on it.

Cheers,
Kim.

The board swap didn't solve the problem so I have learned to live with a work around. I had the nF3 250Gb mobo running Paris with 3 EDS cards for a while, so it does work although I have since heard some bad things about DFI.

Gamma Electronics):

http://www.bedini.com/base.htm

It B.A.S.E.-ically :) would allow you to do enhanced stereo to the extent where you could place things well outside the speakers... There was an album called "Storm Alert" from a thrash-metal group called Torture that I engineered I did, called Torture... though it's not something I'd say was a great

production overall (OK, I guess for the genre it might have
been appropriate at the time, but IMO they wanted it very much
"rough-edged", and it coulda been a little more polished & it
wouldn't have hurt), there were a few cool "Bedini moments" -
for example, the drummer had one of those enormous kits with
like 8 toms - when he did a roll across all or most of them
(using the Bedini unit across the mix) it sounded like they
would come from behind you & up above in the back corner of the
room, to across the front downward at an angle, and finish up
in the opposite lower corner of the room back behind you again.
This is just with the two regular front stereo speakers, BTW;
not surround sound of any kind.
Neil Kernon recently did a remix of that album (I guess they
have a strong enough cult following to justify a re-release of
