Hi,

I was wondering if anybody knows the reason for this error in Paris.
When I try to open certain paf files I get "There is no disk in the drive
Please insert a disk into drive\Device\Harddisk\DR5"
and sometimes it says DR4

Another error message I get when trying to render a track to disk is:
Error in rendering track to disk, Error code 61449/F009

Thanks for any info you can provide,
Carol

Hmm, can't remember for sure, but the second one may mean your tracks name
is not allowed, no symbols in it for example, OH/L is not allowed but OHL
would be.
