K.

Lots less than Sonic Solutions was though and it master better
in many ways and has a sterling rep with classical people.

What impressed me as well was how good it was a basic tracking
editing and mixing.

 is terrible...

2. I have sat down with it at trade shows twice and it sounded
awful both times.   Now there are dozens of reasons why this
may be such as convertors, monitors, etc etc, but Paris always
sounded great at shows, so it clearly can be done.   I do not know
whether the harshness I heard was the app or something else.

BTW, I bet the PT people can show you bit-for-bit cancellation
tests with PT as well, and thereby "prove" that the mix buss
sounds perfect.

But we know it doesn't, so the test is not telling us something.

Also, one big plus with Sequoia is Jeff Sheridan who will actually
take time from a big project to talk tech with you. Priceless.

Sequoia can handle any MIDI stuff that comes into a normal studio situation,
but programs like DP and Logic have many more tricks and advanced MIDI features.

I like the extra power.
I understand that some VSTI issues still exist, but I could be a little out
of date on this. Samplitude and Sequoia will continues to improve their MIDI
features over time, and could eventually become my one-stop solution.

gt;I haven't needed support for Nuendo/SX yet, so I can't comment there. The
>forum is knowledgeable enough usually that I don't see needing direct
>support.

These forums are absolutely priceless.   I did try to contact
Steinberg once.   Hopeless.

Digi is quite responsive, and they write good manuals. Perhaps
this is another reason for their success.   I have built 2 PT's rooms
now and Digi was great. One of the issues involved was really
hard to sort out and through talking to us they actually found a
bug in the app.

Too bad the product is so mediocre...

>Support was poor with Logic also (at least my attempts to contact email

I did call MOTU about (a DP question) 2 years ago, and it was better
than dealing with Steinberg, but nowhere as good as Digi.

>There is no reason why Nuendo itself would sound bad anymore than
>Samplitude, DP, Logic, Sonar or SawStudio, or Paris for that matter. I

Well, I don't know about that.   Somehow both Paris and Sonic
Solutions had terrific sounding demos at more than one big trade
show.

It's not that hard.

When a company settles for sounding like garbage at a trade show,
there is something

Like Paris Pro huh?

You are right of course, but like the doctor who listens to an ache
that everyone else has dismissed, and looks closer only to discover
a new disease and save a life, we grow when we hear something
that should not be there, or miss something that should.

There will come a point when DAW manufacturers stop making silly
errors like the PT mix buss, and then things will sound mostly the
same, but hey, look at the hardware vs. plugin debate!   Hardware
versions of the same product often sound better.

There is plenty of room for progress in digital audio.

take care

DC"Bill Lorentzen" <bill@lorentzen.ws> wrote:

>Go ahead ask me what you want to know...

I heard it likes the Mackie control well.

Hey, what did you spend on the computer?   RAM?   What sort of
Mobo etc?

I like Sequoia almost enough to not buy a Mac...

Dang!

DCWe are going to a cool restaurant in Palm Springs ("bom bings" to
my 4-year old) so we don't have to do any dishes. yes!

For those of you from other than the US, come visit and try one
of these amazing T-day dinners.

May you have a wonderful Thanksgiving!

tracking her new project with the SE Gemini !

Greetings,

Tony Benson has been kind enough to offer his web-site
for hosting some cool PARIS and Audio files etc...

As many of you know - I am always looking for cool and Unique
sounding products that are in the Spirit of this PARIS Community.

I believe the SE Mic company has some really Great Mics that deserve
a listen.
http://www.seelectronics.com/whatsnew.html

Tony will post some MP3 and Wav files that were Recorded By
Roger Nichols for NARAS
(National Academy of Recording Arts and Science)
http://www.rogernichols.com/

Here is the Challenge - there are 5 mics in the Shoot out:
TELEFUNKEN U47
SOUNDELUX U95 (AKG C12)
SE GEMINI
SE 5600A
SE ICIS

These are all Tube Mics - The Telefunken and Soundelux

cost Thousands $$$ More !!

Listen to the Samples - then Properly identify the Mics in order.

Anyone that can Properly identify these Mics will Win -

SE Microphone Deluxe Windscreen $ 59 Value
http://www.seelectronics.com/popscreen.html
Planet Waves Mic Cable $69 Value
http://www.planet-waves.com/Pcablesdetails.aspx?ID=2

Files are posted @
www.mercysakes.com

Good Luck !!

Please send your entry to:
Morgan@Eastcoastmusicmall.com

Any questions - Call or Email me

True - of course there is a reason why the demo sounded bad - possibly just
bad material. There was a Paris demo that didn't sound good as well, or at
least didn't impress me. You are right - it isn't that hard. I just don't
understand why mp3 loops are considered satisfactory for demos. I think
some of it has to do with just how large the content would be for a
full-fledged demo to include with the product - should be no big deal for
tradeshows, but instead they end up with the low rent demos that come with
the app instead.

True. The point was that sometimes we "think" we hear something better,
only to blind A/B it to another source and realize we pick A and B equally.
The same happened with me an Samplitude - I heard the hype, opened the app
and thought that somehow it seemed to sound better on even a single stereo
file. I A/B'd it and realized it was just
psycho-acoustic-hyper-expectationalism (aka PAHE ;-)
>

If I were recording and editing classical, Sequoia would be at the top of my
list simply for editing. No need for VSTi's in that market, so editing
would be key. There is no doubt Samplitude and Sequoia are stellar apps for
audio (mediocre for midi/production though, and poor for composing, which is
what I do).
>

I once found some audio anomalies in Paris that I have screen shots for.
Another user raised questions about the validity of those results (perhaps
system/power related?), but I my procedure was valid, and tested mulitple
times. They showed odd gain behavior at lower levels that technically would
have been bad news for a newer digital product (unable to pass a single

audio file transparently), but this was after it was on its' way down, and
we all loved the sound, so no one really cared.
>
> There will come a point when DAW manufacturers stop making silly

> versions of the same product often sound better.
>
> There is plenty of room for progress in digital audio.

Absolutely. I am hoping 64-bit OSs, apps, and mix engines reveal a higher
quality we assumed we were missing, but have yet to compare audibly (and
hopefully some performance boost at the same time - long shot I suppose).
I'm all for improvement and never saying my DAW of choice is the be-all,
end-all. That would be shortsighted. It is in fact all about the music,
not the gear.

Happy Thanksgiving!

>I think you're right. I just listened with fresh ears. It's barely
noticable, but it's noticable nonetheless. What happens is that Nero
upsamples the .wma with a bunch of empty zeroes to create the audio CD. Then
the encoding feature grabs those and downsamples them again. Sounds like the
codec is throwing out more than just the empty zeroes (sigh).

>Well kinda. As I understand it there's no zeros. MP3's actually have a full
16 bits of resolution... it's just that some of the bits are actually wrong.
;o)

So what happens is, you had the WMA files (which have some bits wrong) which
is then converted to 16/44.1 CD audio (albeit with some bits wrong). Your
MP3 conversion software then converts the audio (complete with wrong bits)
into MP3, which then creates an MP3, with full 16 bit resolution, but with
some of the bits wrong once again, hence it no longer matches even the output
of the WMA, which was, in itself, wrong...

You'll possibly be lucky to a degree, in that it's quite possible that the
conversions will make similar mistakes to each other, hence your cumulative
error will possibly be less than double the original errors.

Best to start from wavs though.

Cheers,
Kim.

em with a strat....what a
>sound....just don't have the room/muscles for one....lol

Yes.. My other one is a blonde 1952 with upgraded motors and
a Renkus HF driver and a EV for the bottom. Recently a client
gave me a Peavey speaker manager so I biamped it using a great
old Altec stereo tube amp and a Summit mic pre as a front end
for guitar.   I spent hours with the crossover point, slope and EQ
and I think I found the last 10%.

And you know what? I think my Yamaha UD-Stomp sounds better...

(yipes, did I say that??)

Yes folks, for that big rotary sound, the chips beat the rotors...

What a world... Oh, no, I'm melting, look what you've done!!

heh heh

DCHer comes the wonderful Chainer wrapper to the rescue.
You can use any compressor (except for the oines that introduce latency like
UAD1).

Most compressors out there including the free ones I have posted are 0 latency
like TC works mda and others.
Chainer has a great option , wet and dry volume !
With wet volume you hear only the sound after the vst plugin and with dry
volume you hear the sound just before the vst effect.
So having dry at 99 volume you can put a vst compressor hitting really hard
and just raise the wet volume until you achieve the desired effect.
While compressors use very low cpu you can use the same compressor on every
drumtrack opening chainer on every drum track and have sort of what we call
buss compressing.
0 latency for the above method.
To make sure if your vst plugin is 0 latent there is a nice free program
called "vst spy", this scans for vst and report 'amoung others, also the
initial latency of the plugin...
Cheers,
DimitriosEdit....
>
> Yes folks, for that big rotary sound, the chips beat the rotors...
>
Edit.....

BLASPEMOUS!!!!!!!

I've got a 142 with a 147 amp and it SCREAMS!!!!

No cheesy bag of chips will ever get that sound...

;-)

Don http://video.google.com/videoplay?docid=-4628046460703829608 &q=racer+XIn the US I
hope ...:p
