I need to locate an MP3 player with a semi-decent audio output to = replace my aged iPod first gen player. I'm using it for pre recorded = sequencing live band stuff, and it's more hobby than anything else = really, but like most of my projects I want to do it right and do it = once. Click out the left, music in mono out the right. I don't care if = it plays video or not. WAV playback would be nice, but not necessary. = 128k minimum MP3 is fine, or an equivalent in another format (OGG, WMA, = M4P, etc...) as long as the format isn't so off the beaten path I have = to go through hours of nonsense to get it loaded. If I have to carry a = laptop to program it, I can and it's not the end of the world but I'd = rather not, really. At that juncture, I might as well just load Winamp = on the laptop instead.=20

Here's the stuff I'm looking for it to do:=20

- 1.. playlist capability on the playback unit
- 2.. decent enough playback audio quality to be usable through a PA at = 130+dB without creating a windstorm sound. Obviously channel bleed is a = real bad thing at those levels, and is to be avoided.
- 3.. ability to scroll up a 'surprise' song request on demand quickly.
- 4.. Easy to use. My drummer's a smart dude, but hitting 5 buttons to = get where you want to go is a good way to lose the dance floor.=20
- 5.. MUST be solid and reliable in operation. Reset pinholes make me = nervous about reliable operation.

Preferences, but not necessities: =20

- 1.. works with iTunes, Windows Media Player or Media Monkey.Open to = suggestions here to some degree.=20
- 2.. touch screen would be nice. Again, not a deal breaker.
- 3.. Internal memory and MicroSD option.
- 4.. Some way to attach it to a mic stand for ease of operation w/o = having to pick it up constantly.=20

Cost plays some into this but it's not the main objective.Reliability = and quick operation are. Anyone using or seen such a device in use?

AA

I'd look a Cowon to begin with. Great audio quality and features. Highly recommended. Plays various formats (including wav, flac, ogg, etc), good eq options (semi-parametric multiband, etc), records, etc, etc.

Possibly also worth considering: I-River, Creative Zen, Sony and Microsoft

Xune. Personally I'm not an I-Pod fan (for various reasons, including audio quality).

I used to have an I-River IHP-140 (then a 320), which were great, but am about to get an laudio 7 (though that particular model doesn't have the easiest user interface - might be better off with one of their larger touchscreen models; I just wanted something small).

Good luck!

Dan

This Cowon stuff looks real interesting, and I had no idea they existed down here in the deep south. Gracias for the lead!
