Hi all,

I just wanted to confirm that I've got Paris running on my Mac Pro with
the virtuavia expansion chassis running XP. This is a 4 card/4 mec setup
with multiple adat cards as well as analog cards in each mec.

I have MTC sending and receiving to a second mac pro running PTHD with
Pro Tools 8, (2 Lynx Auroras and 2 Digi 192 digital i/o's) with 32
channels of adat piping from PT to Paris, then 2 channels of spdif back
from Paris to Pro Tools for mixdown. All the mecs and digi interfaces
are clocked from a Lucid GenX 192. Sync seems to work ok with either PT
or Paris as master, but I have no way of testing adat sync since the PT
interfaces don't have it.

Thanks to Mike for his assistance over the weekend. The new drivers work
great!

Cheers,

TC
