I have 2 cards tied together, 2 Mecs ,2 C16s,I need to tie all this together and I haven't a clue. I know I need a word clock (need help with the specifics)How does it all tie together and how does it look afterwards in the patchbay. Can someone walk me thru this please. Thanks Ron

It's early and I haven't had my coffee yet and my head's in income tax return filing mode (meaning it's shove way up where the sun don't shine) but I think all you need is a 75 ohm BNC cable (RCA type) from MEC 1 out to MEC 2 in and you're done.

If your two EDS cards are tied together that should do it for inside the computer

If this info is wrong someone will point you in the right direction

Don't think you need an external word clock generator until you get to 3 MECs...

Ted
