>Richard,

I've been running PARIS on a dual 1GHz G4 Quicksilver for a few years now, and it works great. As long as you can load and boot from a separate install of OS 9 you should be fine. I also use this same machine in OS X to run Digital Performer 4.6 along with Mach Five, Drumagog, dfh Superior, a UAD-1 card, Sample Tank 2, Kontakt, many other AU plug ins, etc. and it also works fine. Obviously, a G5 would allow me more tracks and plug ins, but the G4 gets the job done with few work arounds. Anyway, just though you should know PARIS will run fine a G4 if you don't want to mess with going to a PC.

Tony

>I'm no computer guru, but at least on my mobo its possible to disable the onboard sound and use a card. I use a Soundblaster card, though I've thought

of upgrading. If they're still selling them, I've read good things about the M-Audio Audiophile card )(99 bucks). For the same price Emu's got a 24/96 card -0404. But, if I may, you might consider mastering in Paris.

You can either copy your 2 tracks to a new submix within the project you're working on, or create a new project and import the 2 track files. This way you get the benefit of Paris' sound, Eq's and plug in's, plus any DX or VST stuff you've got.

>Very subjective, but a definite improvement in soundstage and clarity.

    If I had to put a number to it I would say 5-10%.

David.

>After some time trying I came up to the following preset that sounds very close to UAD1's LA2 compressor

Threshold : -75.2 (around -10 gain reduction)

Ratio 1.20:1

Attack : 0,00120 sec

Release: 0.0052 sec

Lookahead 0.002

Output : 6.4

Let me know if you here it the way I do, close to LA2 of UAD1.

I was trying this hearing a snare (top miced) drum track.

Regards,

DimitriosThis is what I get from being awol so much...

When was Paris wires released? and where would I go to get it?

Thanks,

Jeff
