Hey,

A friend of mine borrowed my old, beat up original Pod and really liked it. I told him that by now there were probably a number of gadgets that did it better, but not being much of a gearhead, I didn't know what to suggest. Any ideas? (Silly question, I know.)

The tonelab le is amazing and kills the rest from my world. \$400. Once you get one you can get my patches here:

www.kfocus.com/LEpatches.zip

I also use a Tonelab and prefer it over the rest, though the new Pod does not suck. The LE is a floor unit w/ complete pedal control built in

and is a great buy IMHO, but I think you can also get the original box unit like I have as well. I don't think there is any difference in sounds.

One caveat: the unit is not as robust as I think a professional piece should be, and must be handled carefully. I have a bad output jack and broken power switch on mine, neither of which prevent it from working. I also have a problem with the LED readout, which is v/ dim and can barely be read in direct sunlight. HOWEVER, considering all it does, at \$400 it is not priced like a professional piece, so I really can't complain too much.

Hey Bill and Sarah,

I love my Tonelab too. It sounds great.

It has a broken power switch and
the leds that show preset choice won't light. It is still usable.
The two things that bug me most are the clunking
between patches and lack of decent compressors.

Outboard compression is an easy fix for that. The clunking sound is so old school I'm used to it.

you must not have the LE

John,

I have the regular Tonelab SE. If they fixed the problems
I've sighted that's great. I tried contacting them with
suggestions but never got any replies.

How many compressors are available in the LE?

For me the LE is dreamy. Here's a list of all the models in it.
Effects are on their own tab at the bottom of the spreadsheet.

www.kfocus.com/Tonelab_LE_Models.xls

It has one compressor and it is the
MXR Super Comp (Dyna Comp + Attack control)

Looks the same list as the SE. I don't mind the compressor, myself. It's no dbx 160X (which I used to use in my guitar rack), but what the hey. I don't want to carry a rack any more (or need cartage for doing a gig!)

I'm not a huge fan of the reverbs, though. I hope they do a more up market model someday with better f/x and a more robust box. How is the LE for roadworthiness?

Bill,

They look quite similar to each other however the LE is 24 bit with SPDIF. There's a plus for recording.

I'd like to A-B them to see how much the tones differ.

I have Tonelab LE here, but havn't learned so much of it yet, other then it
have a marvelous sound. So I had to own one:-)

Get my patches here:

<http://www.kfocus.com/LEpatches.zip>

and the list of models emulated.....
http://www.kfocus.com/Tonelab_LE_Models.xls

This thing is my baby !

Does anyone know of a site that has audio samples of the various modelers and amp emulators?

I don't know jack about spdif but I bought a toslink to rca convertor for my LE spdif so it could go into my RME audio card (9652) but found out that since I'm recording at 48k and using my digimax fs as master that I can't use the LE spdif. it appears to ONLY work at 44.1 and can't slave to 48, so i sold the converter. I'm doing just audio out and it sounds awesome. The noise gate on the LE is amazing.

Ya the noise gate on the SE is also great.
They did a lot of things right in those boxes.
