80GIG WD 8 meg cache!)

An RME type audio card or some other way to send the synths to PARIS. Size of chassis may prohibit some cards.

An outboard Midi card.

My application is to use it as an outboard softsynth box. Now I use a = stand=20 alone Paris rig (3.0 P4) and a stand alone Cubase rig (AMD 1.4mgz)

. My = budget=20 is so low that I really can't afford even the \$200 BUT I will if it's = going to suffice=20 and be better than waiting 4 years for a used/obsolete comp then maybe.

My main concern is Compaq's proprietary setup. Can I, will I need to = reinstall Windows on the C drive? After reading specs, these things worry me:

3 PCI slots

Onboard graphics chip - No AGP slot!!!

Enough onboard 60 day trial software to make it stop and die.

16.54" Depth	Room for an RME or equivalent sound card?
15.35" Height	" " " " "
7.17" Width	" " " " "

Is this whole thing stupid to consider? Sale is tomorrow but I don't want something that's going to be a big problem. =20

All opinions welcome!
Tom=20
