Hey Tyrone,

Not sure if this could help, but I'm using 4.0, on a mac.

Thanks Mike! been away for several days....just getting back settled. I installed a new HD as my existing drive worked, but was a bit flaky. I can't seem to remember how to get Logic to see my Unitor 8. It still works on the flaky drive and I have gone back and forth checking out the settings, but can't seem to figure out why my new install does'nt see it. It is definitely a configuration issue.

Any thoughts?

Tyrone
