I am using XP. I had no problem two days ago recording into Paris but tried to open it tonight and got the error message. I have tried re-setting the cache in the computer to both "programs" and cache setting to no avail. Any advice would be greatly appreciated. Thans!

I believe the error is referring to a missing line in your paris.cfg file but it's been a while.

I haven't seen this one myself, but I'd try renaming the file Paris Backup.cfg to paris.cfg in the Paris Pro folder.

Let us know how it goes.

Mike
