Greetings,

As my fancy new Quad core audio uber-boxen has only one PCI slot which is my Pulsar card (still love that little bastard) it appears I have to get a UAD-2 for all of my Roland Space Echo and Helios EQ goodness.

Universal Audio is running LIMITED TIME promo where they will oh so generously not make me pay for the plugs I've already paid for a second time. Might Microsoft of them if you ask me. Post 12/31 I'll have to pay for them again.

Anyone here have opinions about these?

TCB
