ighn't this be possible? It would seem that the AMD 64 4200 X2 would be
faster since the cores are running at 2200 MHz per processor, but the
Opteron has 2 x 1MB L2 cache and an unlocked multiplier (if accessable from
the bios) and from what I hear, a better formulation of silicon.

Hmmmmmm.....man I'm tempted. Why don't y'all pass the plate and send
me one of these?

;oDThad, you're setting ideas in my head but I've buyed my Christmas presents
for this year;-o. I've looked at the M-Audio plenty of times the last couple
of months but I have some different sizes mixers here to couple up to my
E-MU 1820M, so maybe I'll end up "only" with a Frontier. But have thoughts
about how clean and easy it will be, only with an all in one box, so the
idea is still living.

>>TCB
>.....what so?-o)....if you're first thinking these thoughts, why not
think bigger? Opteron have a 2400 MHz too for socket 939, named 180. For the
socket 940 you can get a 2800 MHz for about 1500 boxes to use with a cheap
Asus SK8N 70\$ board, so the brain will have big problems to follow it up
when it comes to speed;-).....
