MXL MXLUSB-006 Powered Condenser Microphone.

I'm astounded at the quality of this. It's not a toy. Used with the the little windows recorder applet it can record a high quality 16/44.1 .wav and that's all that's necessary here for Amy's songwriter scratch pad. Cubase LE doesn't recognize it as an input device, but I'm going to see what I can do about this.

WHat kind of device does it show up as? A USB composite audio something or another, and is it WDM, ASIO or MME?

It shows up as "USB Audio Device" but can't be selected as an input device in Cubase. Strange.

Because you've got the regular RME or ASIO driver selected in  
your VST devices, perhaps? If you pull that menu up, does it  
give you the USB mic driver as an option?

HI DJ,  
I think you'll have to make the USB mic thing the windows default record device and then select ASIO MME or maybe ASIO DX as the driver. This will give very high latency if you try to monitor the incoming signal depending how the signal gets monitored on the mic.  
You might want to try using the ASIO for all driver. It might make things work better in Cubase.
