Subject: Paging Mike Audet -- where to get driver?
Posted by pbraun on Tue, 01 Sep 2009 14:29:27 GMT

Mike,

Since I've decided to give XP a try, where do I find all your XP gooderness? I suppose I could fire up Agent and browse through the postings in the old group, or could just be lazy and post here.

Also, since I can't find the actual specs on the pci slots in either of the Dells I have, are the 3.3v slots physically smaller? That is, if the EDS card fits in the slot, is it a 5v slot?

Thanks.

Well, duhhh.....

You mean I should actually read those little letters?

Hmmm....

Whoa! It's a veritable cornucopia of Paris goodness. Imagine that?

I'm going back into my cave now.....

I believe (but can't say for certain) that PCI slots are "keyed" (the channel the card sits in has a divider breaking it into two slots of unequal length corresponding to the two tabs of contacts on the EDS card), meaning that only cards that will work will physically fit in the slot.

As to the header at the top - yep, the idea was to get all PARIS links in one handy spot close at hand, so you can find the resources you need directly. Hope it's useful.
