Subject: PARIS install ?
Posted by Jim Drago[2] on Sat, 30 Jan 2010 18:33:29 GMT

Installing PARIS on a new box and memory has faded. While installing the (PARIS effects subsystem) the 3rd window in says

setup will add program icons to the proagramm folder listed below

then it gives me a box OR a list of existing folders. One of the existing folders is accessories and then startup along with some of my own program folders. I think I have always just chosen accessories. Is there a better folder to place this in or does it matter.

Should I type a destination in or just choose one of the 2 listed above?

Doesn't really matter much, Jim; I think it's just asking if you want to add shortcuts to PARIS to those places for easy access.
