Looking at pariswiki again about headphone mixes looking at the picture and description It reads, In the Patch Bay Window, drag the Interface, Sub-Mixer and Mixer FX objects onto the Patch Bay desktop. I don't have a sub-mixer and mixer FX.... Is it because I'm using paris 1.1 ?? I have inserts, aux sends, mixer, MEC Are these the same ????? thx

There should be a Mixer A, but there's no submixer. Don't know what that gain thing could be - I mean, off the top of my head it sounds to me like it's lost track of the difference between +4 and -10 somewhere on the way to the outputs you're driving the Furman with.

I'd guess you've probably already tried a reboot of everything (ie PARIS/puter/hardware)?

You should at least get to Paris 2.2, then we could help you troubleshoot, since the Patch Bay set ups are the same as 3.0
