Everything is frozen solid, no mouse , keybrd, hard reset needed. Also, Paris has been flaky for the past month or so, all kinds of digital pops, I'm working, all of a sudden, graphic display on all 3 monitors goes to gibberish, need to hard reset. Re-seated all cards,ram, IDE cables, cleaned MEC /EDS connectors, re-imaged my OS drive.
Then I noticed during tonight's crash that the LEDs on the front of the 442 were dimming in and out = bad pwr supply. So I decide to swap the pwr supply and looky looky what I found.

I have a long session booked for this evening so decide to try a fix. Ended up replacing the connector on the mobo with one I had off an old brd, spliced a used connector onto the pwr supply side, so far so good.

Just thought I'd share my grief and fix with others.
Rob

Thanks Man,
Glad your up and running.

respect
Nappy

1700+ Athalon, 256 ram, 3HD, DVD burner, Matrox G450 dual head AGP vid, 3dfx PCI vid, 2 EDS, 1 MEC, 1 442, 2 IF2, 480w pwr supply, 2 extra case fans, ECS mobo.

Not sure what happened there, bad connector on the mobo side, heated = BBQ...?
