So I need a firwire drive and see that alot of people seem to like Seagate right now.I see that their external drives only have the 1 year warranty compared to the 5 year on internal drives.

Should I buy a firewire enclosure then put the Seagate in or just get the external drive?

Pete

Get the complete external drive. Very nice, very reliable.

You don't need to put drives in enclosures any more.

I use one every day.

I've heard that also. The USB 2 spec is a little faster, but real world is a little slower.

I just went with an internal Seagate after receiving two DOA Western Digitals. No problems and the drives are performing well. You might want to check to make sure the Seagate Firewire uses the Oxford 911 chip set. Historically it's been the preferred chip set, but it might not make as much of a difference now and days. I have had good luck and saved a bit of money "rolling" my own Firewire drives. Newegg has a 250 Gig Seagate SATA for around \$100.00 bucks, and I've recently seen external Firewire cases with Oxford 911 for around \$40.00. they're simple to put together. My two cents.

Sounds like a good deal.

Hi Neil,

Mine has both USB2 and FW. Oddly enough the FW is still faster.

I know the spec sez that the USB2 is slightly quicker, but in real life it ain't so. I copied a couple of large files and the FW side was about 30% faster than the USB2. odd... Yes the computer and the hub were both USB2.

A video editor friend told me about this, and he was right.

Thanks DC,good to know.I was wondering if usb2 would be just as good or better.Circuit City has the 200GB usb/firewire Seagates at \$129 with rebates now.I think I'll pick up 1 or 2.

Thanks,  
Pete

Interesting... the one I have is USB-2 only, so I can't really  
compare.... good info to know, though!
