Hi All!
I've seen a lot of people have two C-16.
I also have two C-16. Is it possible to connect two C-16 to control 32 channels (2 mixer.) I also have two 2xEDS1000 cards.
Many thanks!

Absolutely. Hook one up to each EDS and (very important) assign each to a separate submix.

Thanks!
But i can't assign each EDS to a separate submix.
You can help me?

Sure - I'm not in front of PARIS at the moment but from memory: your C16s will become tracks 1-16 and 17-32 respectively. On the C16 you want to control 17-32, hold down the "submix" button. Notice how Track 1 has a light over it? That's indicating it's assigned to Submix 1. I seem to recall you just press "2" on your numerical keypad and it will switch to Submix 2, and you're done.

Thank you, Kerry!
I'll try and then let you know.
