Yes, but I'd still need a boot manager. I was going to do 3 per drive, but had trouble with that too, so switched to an attempt at 6 on the one drive... but that hasn't brought me joy yet.

Erlilo's program may work yet though if I can work out how to use it properly.

Cheers,  
Kim.

er have my  
pair - awhile ago I got a Kiwi instead that I found on sale,  
and I'm waiting to find another one (at something less than  
street price), and that will then be my main LDC pair.

NeilAT4033 is my best female mic !  
I have never had any better results using other mic on females with great  
timbre.  
I have done though a minor mod on this mic.  
I have bypassed output electrolytic cap (a ver good one anyway) with MIT 0.1  
polyester cap.  
Great great detail....  
Regards,  
Dimitrios

>own system

Yes, I've worked out that much. I can create and delete partitions. What I'm having trouble with currently is getting the "Ghost" department to work properly, so I can load these new partitions with OS's.

One other thing I've noticed is that it seems while you can have up to 255 primary partitions on a drive, you can only actually see 4 at any one time from any given OS, because WinXP refuses to see more than 4. I believe I've pretty much sussed how to deal with all that side of things though. Soon as I get the Ghost thingy happening I'll be cool. You can't use normal Ghost of course when you've created partitions with BootItNG.

Cheers,  
Kim.We've got one here. Looks like a little burrowing owl. It appears that the cat grabbed it and ran into the house with it and it turned around and kicked kitty's ass.

Doesn't appear to be any worse for the wear and is quite agile and acrobatic.. Now if we could just persuade it to go outside.

;o)Pictures, dammit!

WTF is a burrowing owl?

Jimmy

Reminds me of the few times bats found their way in. The cats looked like marionette puppets trying to pop up and get the suckers. Bats are good for the yard too.
