Hello people... the C -16 was working well when I first got it.. didn't use it for a while.. reconnected it again.. it lit all leds and did nothing.. didn't move or function at all.. then it stopped the Paris from working so I had to reinstall the Paris Pro 3 ... then reconnecting the C-16 no leds even lit anymore.. did it fry ? any suggestions ?

Thanks alot in advance..

p.s : I am using aABIT AV8 3Rd eye MOBO with an Athlon AMD +3500 64 bit Processor with 4 EDS-1000 cards ( working on SBS Chassis expansion ) and MEC ( Black )
