Ok, here we go again with the Mec-B.

Seems for some reason, if you change which Mec is the master then It will record fine. So the slave card will not show up on the VU's in the mixer window & will not record at all.

I use a Master clock and have both Mec's synced to them. This works fine they lock up good. So don't think it's a clocking problems at all.

Now I know I added this second card later after I loaded my first Paris a few years ago. I was told I did not need to reload the software for the second card. YES/NO?

Also I heard if you have a older EDS 1000 it may not work. YES/NO? This one has a Serial #060000317

I think I have one that is a EDS-X1000 I think that's what it's called. But a newer one and I used that for the master card "A".

So I don't know what I'm doing wrong. I must turn to you guys for help on this one.

Cheers,

Jeff

Hmm. First things first:

- 1) you shouldn't need to reload the software, the new resources should normally just show up.
- 2) all EDS1000 are the same as far as I know
- 3) an EDS1000x, as far as I know, is just an EDS1000 - the "X" meant that it came bundled with the ribbon cables that you must use to interconnect multiple EDS cards.

You have to be very careful when installing those ribbon cables, by the way, because in a rare bit of thoughtless engineering (most of the PARIS design is seriously well-engineered) the ribbon cable interconnects aren't "keyed" and don't even have sockets, so basically it's easy to either 1) install them backwards or 2) miss one row of pins so that only eight of the ten pins engage (naturally that means they're the wrong pins for the sockets too). Very worth re-checking.

Did you hit the Wiki yet? There are some tips about "MECs that won't pass audio". The Bugs/Troubleshooting page is the place to start, but you might be looking at this problem or a variant.

Yes I did look at the Wiki. The one about my problem the link will not work.

The other, the guy was getting VU's in his mixer.

Soooooo, I guess I will take the computer apart again and check the cable and look for any sign of a problem.

I did go by the Paris book in it. But hey Im human so need to recheck again.

I will let you know what I find.

Buy Hey the other 16 channels work great and sound good to. Now the cable is in phase again.

So things are looking up. Just need the other channels is all.

Thanks guys,

Jeff

Hi Jeff,

Assuming all of your hardware and connections are working and correct I'd suggest you try wiring your Mecs as follows. Master wordclock out to Mec A in. Mec A out to Mec B in. Termination can't hurt on Mec B. This doesn't make sense I know but worked for me with an ASUS P4 mobo. I am assuming you only have a two card system. If you have more than two cards make sure the last mec is attached to the last EDS card.

I hope one of these fixes solves the problem !

Good luck,

Tom

Hello Tom,

I'm using a master clock to clock all the paris systems.
So I'm coming out the master clock to each input on both Paris
system. I have no Termination as of yet.
So each EDS-1000 gets it's own input clock form the master.

I will be opening my computer soon to recheck the cables. Maybe
I got them wrong. The Pictures are not the best on this. So I could have the cards back word.

So like I was saying I can use ether card as a master but not hooked up as one system. So it has
to be the clocking or the cables (i would think).

My on Vacation as of now so I will give it a shot when I return.

Cheers,

Jeff Albro
