Anyone with ideas...I've been running Paris on 98SE for years, just last night I go to open a project and get 2 error messages " I/O modules not available in this configuration....bla, bla" I have had this before when I forget to turn on the MEC, but it's on, I tried another cable...nada! any thoughts ? Thanks

Hi Ced,

Are you getting this messages when Paris starts up or just when you open a project?

Het Terry...I get this on opening a project, Also, I've done re-boots, pulled and reset cards etc. Otherwise, Paris opens up as normal....I also get no "sample rate" light showing..... "Terry Thomas" <god1stjt@alltel.net> wrote:

Hi Ced,

This normally happens when: (1)The power goes out and you're running dual monitors but the settings show up on just one monitor (2)When you originally did this project you were using only 1 Mec. You just need to reset your Patch Bay configuration.

Hey Terry...unfortunately I've checked the patch bay and the MEC and 8in card do not appear in it !"Terry Thomas" <god1stjt@alltel.net> wrote:

Hey Ced,

Check with Mike Audet or Aaron Allen on this problem. Sometime if you have two Mec Interface in the Patching area configurated (like A&B) and you save

it; but, you are really only using "A" then you will get this message.

well....I'm going to reply to my own call for help...Steve "Artguy" generously lent me his gear in order to troubleshoot by item....problem seems to be in the EDS 1000 card, don't know what the problem is exactly as everything works except the MEC is not found in the patch bay , but replacing my card has the system up and running again. Any follow-up ideas will be welcome.

bummer, Ced-

maybe it can be repaired... maybe a new (used) one would be cheaper.

It's likely that you have a bent pin somewhere on the EDS at the SCSI 50 pin connection. Inspect it carefully for any bent or broken connections.
