Hi Everyone,

It's been tough to make progress this year, but I'm finally getting traction. I've just started testing a version of the PSCL that is designed to work with jBridge. For those who haven't used jBridge, it allows a 32 bit host to connect with 64 bit VST files. I just started testing it with some 64 bit Waves plugins. So far, so good. The updated PSCL has a low priority thread that checks for jBridge processes and moves them off the CPU used by the PARIS application. This way, we can run 64 bit VSTs on all but one available CPU cores, while not running into the thread-safety issues in the PARIS application.

jBridge can be found here:

<https://jstuff.wordpress.com/jbridge/>

My next move is to work on the kernel driver (scherzo.sys). I bought a new ASUS motherboard with a PCI slot, and the driver does not work with this new board. The new board uses a I/O MMU, which is a new thing for PCs. I suspect that this is the problem, but I'll know more next week. An I/O MMU puts the PCI bus behind a memory controller that has to be programmed in order to allow PCI cards to access main memory. It's an extra level of indirection put in place for security reasons. The driver was not designed for this kind of thing.

I still haven't gotten the EV security certificate. The eventually rejected by documents that were signed by a justice of the peace. It's completely insane. An accountant or a lawyer will do just fine, but a judge can't be trusted. It's nuts. I'm going to go see a notary after I get the kernel driver updated. I only get a year on the certificate, so I think it makes sense to wait until I have this next phase done.

That's all I have to report for now.

All the best,
Mike

Edit Functions Settings EQ Aux Tracks Automation

The screenshot displays a DAW mixer interface with 10 channels. Each channel strip includes a bypass button, a list of active plugins (Abbey Road, CLA-2A Ster, dbx-160 Ster), an EQ 1 section with frequency, gain, and bandwidth controls, an EQ 2 section with a spectrum analyzer, a solo/mute section with faders, and a recording indicator. The EQ 1 section for each channel is set to 1000 Hz, 0.0 dB, and 1.5 BW. The EQ 2 section shows a spectrum analyzer with 'L 100' and 'R 100' labels. The recording indicator for each channel is set to 'REC'. The time display at the bottom left shows 00:01:48.555.

The screenshot shows an IR-L convolution reverb plugin window. The window title is 'IR-L' and it is currently set to 'A: Hall - 1 (Full Reset)'. The 'Full CPU' indicator is active. The 'Name' is 'Hall - 1', 'Type' is 'Concert Hall', 'Date' is '24 Mar 2004', 'SR' is '96000Hz -> 44100Hz', and 'Emitter' is 'Genelec 530D'. The 'Convolution' section shows 'Original' and 'Current' settings for 'Convolution' (1.85s), 'RT60' (1.4s), 'Channels' (4), 'Size' (11267), and 'Distance' (13m). The 'Reverb Time' section includes 'Cnv. Start' (0.000s), 'Cnv. Length' (Full), 'Latency' (11ms), and 'Dry/Wet' (100). The 'Direct' section is set to 'Off'. The 'Output' section shows a level of 0.0. The 'Pre-delay' section is also visible.

Options:

Post Notifica

The screenshot shows a transport control window titled 'Transport: [Untitled Project]'. It features standard transport controls: Stop, Play, Record, and a solo button. The time display shows 00:01:48:16.6 in SMPTE format and 00:00:00:00.0 in another format. The 'PUNCH' and 'LOCK' buttons are also visible. The window has a close button (X) in the top right corner.
